APEC Climate Center Multi Model Ensemble (APCC MME)

- 3M-lead seasonal-rolling forecast since 2005
- 3M-lead monthly-rolling forecast since 2008
- 6M-lead monthly-rolling forecast since September, 2013
- At present, **17** leading climate forecasting centers and institutes in **11** countries are participating.

APCC MME Participation Agencies

- Data collection from the 17 centers and institutes in the world
- Producing seasonal forecast & verification data by MME

APCC MME

Climate Outlook for November 2016 - April 2017

BUSAN, 25 October 2016 – Synthesis of the latest model forecasts for November 2016 to April 2017 (NDJFMA) at the APEC Climate Center (APCC), located in Busan, Korea, indicates the ENSO state to be neutral. The positive temperature anomalies are most likely to prevail over the globe. Highly probable above normal rainfalls over the maritime continent are predicted for NDJ.

Temperature and Precipitation Outlook:

1. Forecast for November 2016 - January 2017

The APCC forecast indicates that the positive temperature anomalies will continue to prevail over much of the globe. Strongly

Lead Centre for Long Range Forecast Multi-Model Ensemble

- Data collection from the GPC's in the world
- Producing seasonal forecast & verification data by MME

The screenshot shows the WMO Lead Centre for Long-Range Forecast Multi-Model Ensemble website. The main content area features a world map titled "Latest Forecast data" with various Global Producing Centres (GPCs) marked. The GPCs listed include: Moscow (2016 AMJ), Exeter (2016 MAM), Toulouse (2016 MAM), Beijing (2016 AMJ), Seoul (2016 AMJ), Tokyo (2016 AMJ), Pretoria (2016 AMJ), Melbourne (2016 AMJ), Montreal (2016 AMJ), Washington (2016 AMJ), and CPTEC (2016 AMJ). Below the map, there are sections for "Latest PMME plot" and "Latest Individual Forecast plot". A "Notice / News" section contains several updates regarding GPC data uploads for FMA 2016, JFM 2016, DJF 2015, NDJ 2015, and OND 2015. At the bottom, a "WMO Global Producing Centres" section displays logos for various centres: Canada, Montreal, BCC, Beijing, ECMWF, Seoul, Tokyo, Toulouse, Washington, Exeter, PCMA, Melbourne, Pretoria, and CPTEC.

WMO Global Producing Centres (13 GPCs)

- Beijing: China Meteorological Administration (CMA)/ Beijing Climate Center (BCC)
- CPTEC: Center for Weather Forecasting and Climate Research/
National Institute for Space Research (INPE)
- ECMWF: European Centre for Medium-Range Weather Forecasts
- Exeter: Met Office, United Kingdom
- Melbourne: Bureau of Meteorology (BoM), Australia
- Montreal: Meteorological Service of Canada (MSC)
- Offenbach: Deutscher Wetterdienst

- Moscow: Hydrometeorological Centre of Russia
- Pretoria: South African Weather Services (SAWS)
- Seoul: Korea Meteorological Administration (KMA)
- Tokyo: Japan Meteorological Agency (JMA)/ Tokyo Climate Center (TCC)
- Toulouse: Météo-France
- Washington: Climate Prediction Center (CPC), National Oceanic and Atmospheric Administration, United States of America

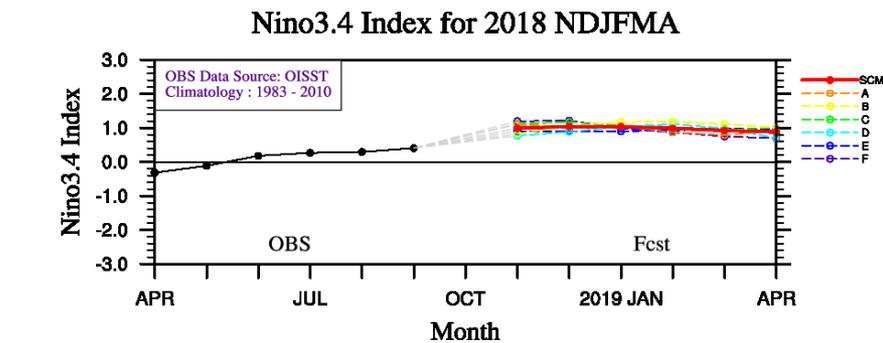

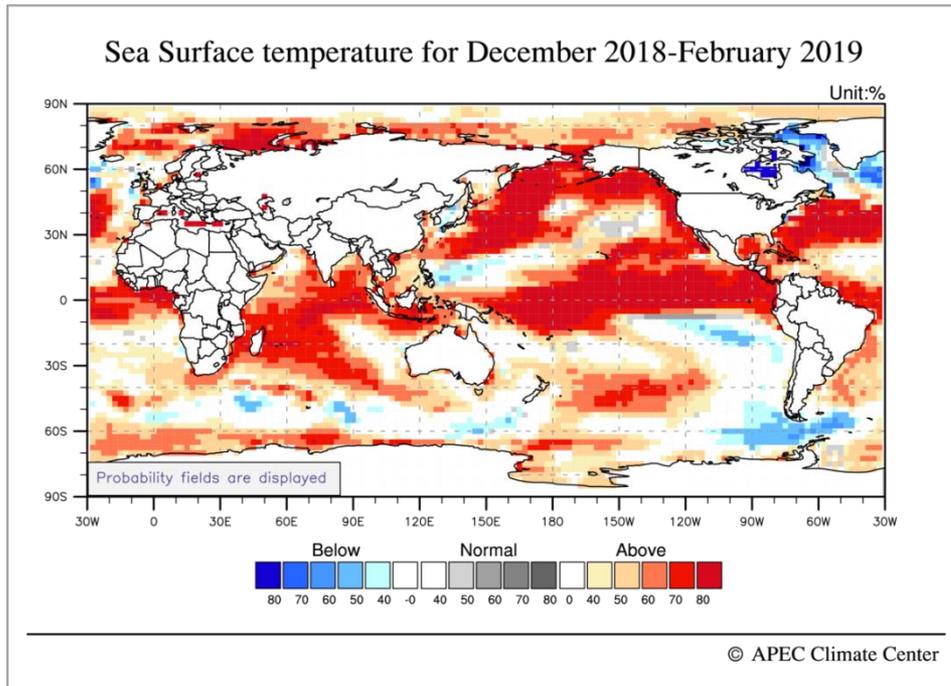

➤ A benefit: diversity of model set, an important condition to improve the MME's forecast skill

ENSO Prediction

ENSO Prediction

- East tropical Pacific SST warming
- Around $+1^{\circ}\text{C}$ SSTA predicted for upcoming 6 months in NINO 3.4 region

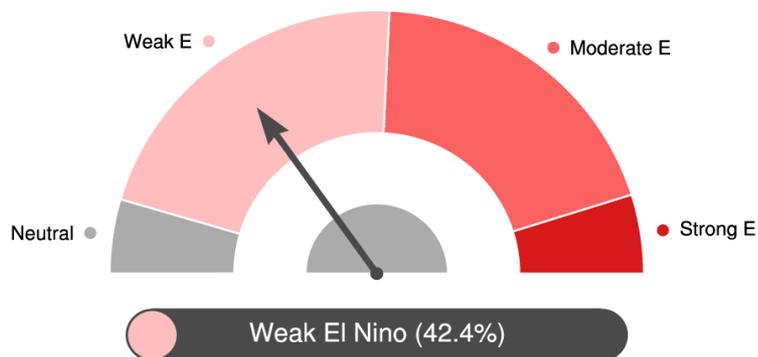

© APEC Climate Center

ENSO Prediction

- Probabilistic ENSO prediction (APCC MME)
- DJF Weak El Nino

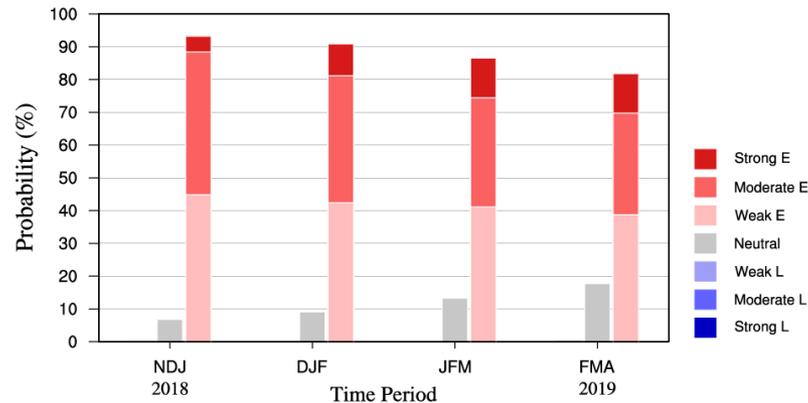

Probabilistic ENSO Forecast for DJF 2018

* ENSO Intensity based on 3M Mean Nino3.4 SST Anomaly (Category Boundries: +/-1.5, 1.0, 0.5°C)

© APEC Climate Center

Probabilistic ENSO Forecast for 2018 NDJFMA

* ENSO Intensity based on 3M Mean Nino3.4 SST Anomaly (Category Boundries: +/-1.5, 1.0, 0.5°C)

Global Winter Prediction

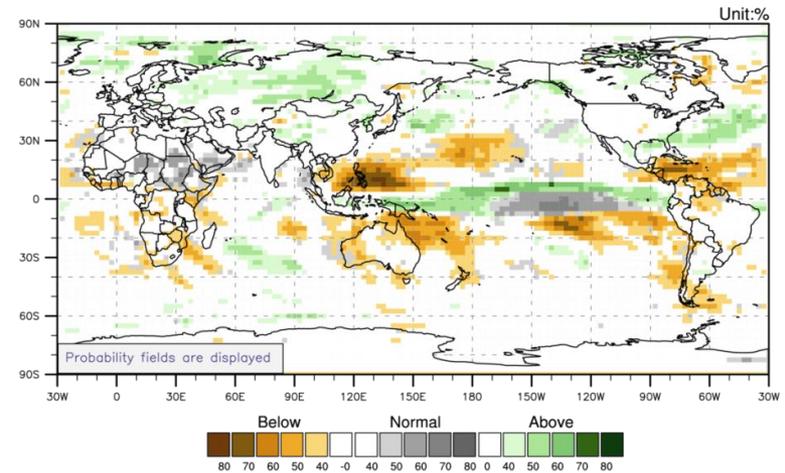

APCC MME DJF MEAN Probabilistic Prediction

Temperature at 2m for December 2018-February 2019

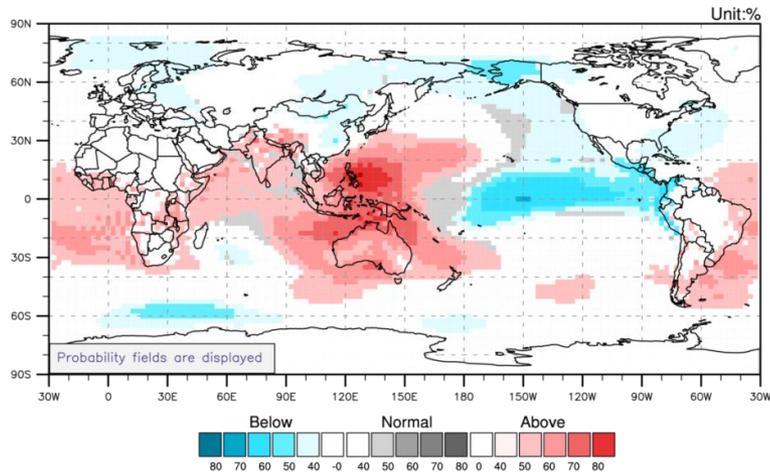

Precipitation for December 2018-February 2019

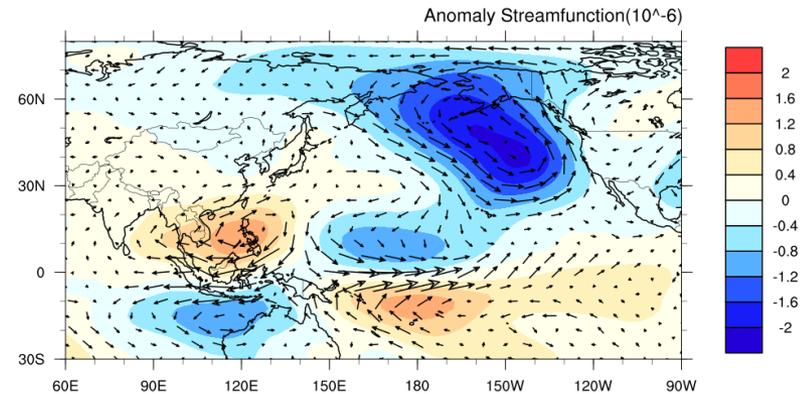

- Northern Hemisphere T2m warming, East Asia
- El Nino response warming in East Asia
- El Nino-like precipitation pattern, but not strong
- Dry western Pacific, wet-neutral eastern Pacific
- Arctic warming, circulation brings cold waves from high-latitudes

APCC MME DJF MEAN Prediction

Sea Level Pressure for December 2018-February 2019

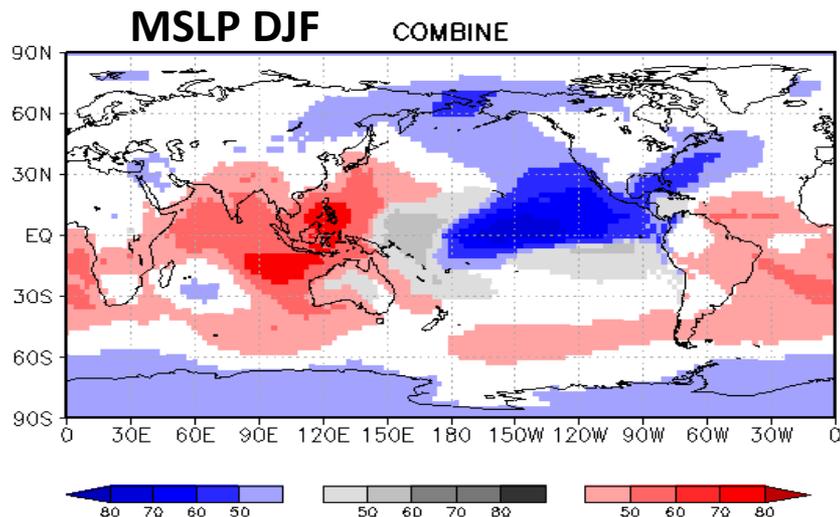

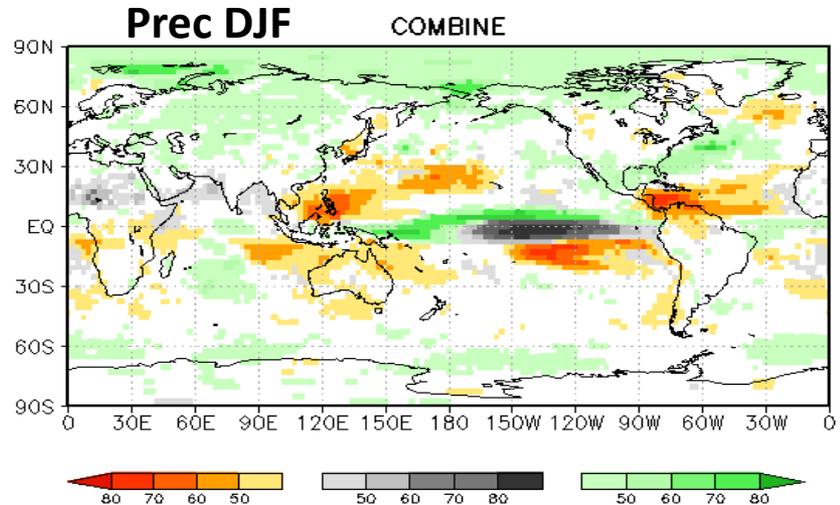

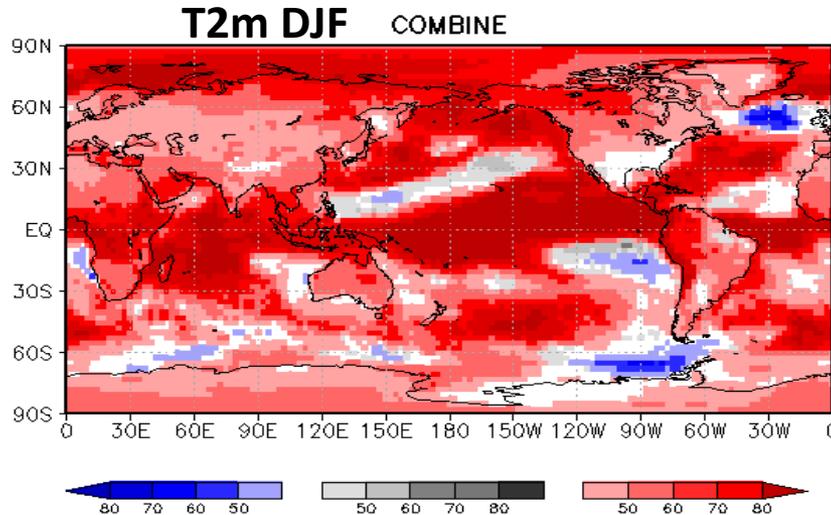

APCC MME 850 WIND DJF 2018

- El Nino like SLP pattern
- Tropical western Pacific High, eastern Pacific Low
- Anti-cyclonic circulation over western Pacific (weak El Nino response)

WMO LC LRFMME DJF MEAN Probabilistic Prediction

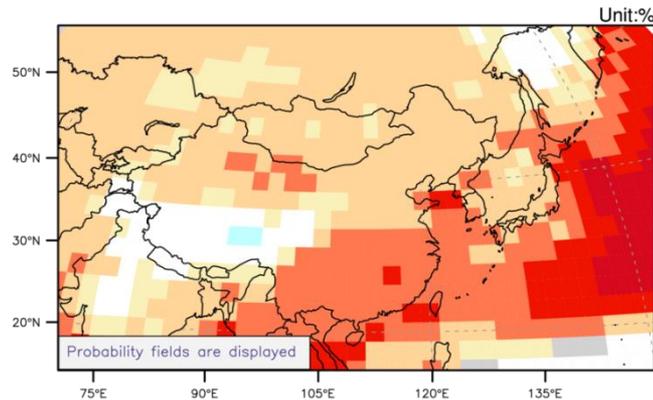

- Northern Hemisphere warming
- Sub-tropical western Pacific cooling
- Weak El Nino like precipitation, SLP pattern
- Sub-tropical western Pacific dry, High pressure
- Similar with APCC MME, generally

East Asia Winter Prediction & Verification

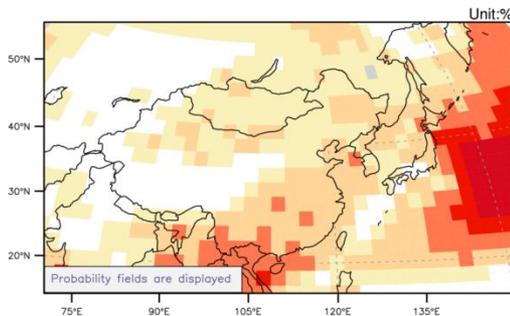

APCC MME 2m temperature

Temperature at 2m for December 2018-February 2019

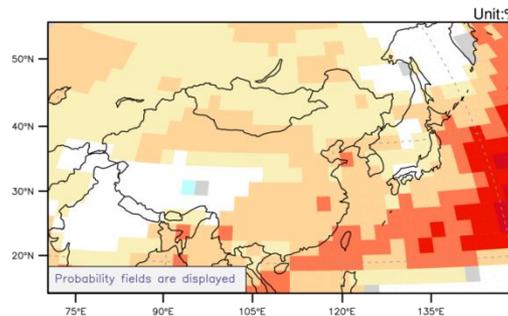

- Warming over East Asia (more than 40% models)
- Mongolia, eastern China, Korea, Japan warming, except the west southern part of China
- Warmer FEB, roughly

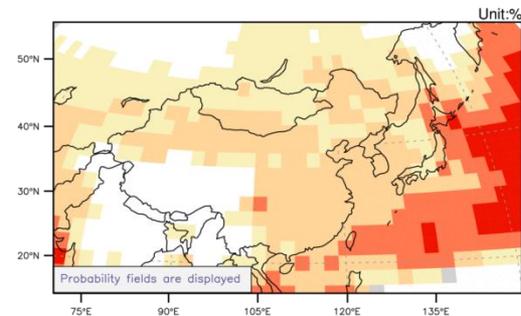

Temperature at 2m for DEC 2018

Temperature at 2m for JAN 2019

Temperature at 2m for FEB 2019

Heidke Skill Score (HSS)

- $Skill = (score\ value - score\ for\ the\ standard\ forecast) / (perfect\ score - score\ for\ the\ standard\ forecast)$
- For the HSS, the "score" is the number correct or the proportion correct. The "standard forecast" is usually the number correct by chance or the proportion correct by chance. Thus using the proportion correct,

$$HSS = \{(a+d)/n - [(a+b)(a+c) + (b+d)(c+d)]/n^2\} / \{1 - [(a+b)(a+c) + (b+d)(c+d)]/n^2\}$$

- This can be simplified into,

$$HSS = \frac{ad - bc}{((a+c) \cdot (c+d) + (a+b) \cdot (b+d)) / 2}$$

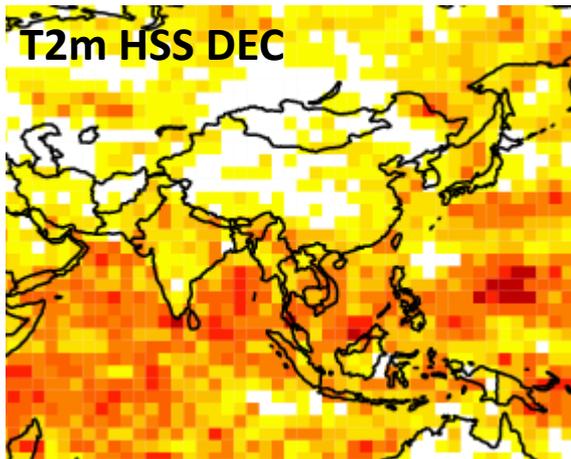

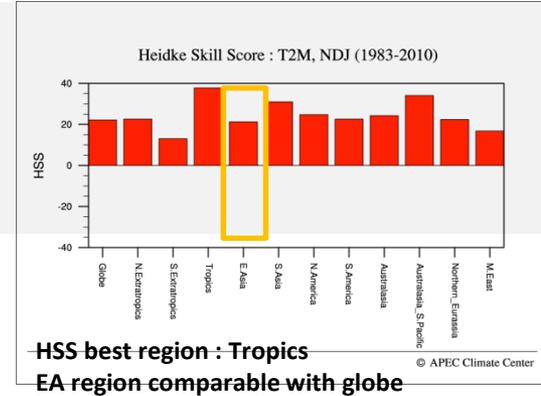

$$-\infty < HSS \leq 1, \quad HSS \leq 0 \text{ no skill}$$

$$HSS > 0 \text{ skillfull}$$

		Observation		
		yes	no	
Forecast	yes	<i>a</i> : hits	<i>b</i> : false alarms	<i>a+b</i> : yes fcsts
	no	<i>c</i> : misses	<i>d</i> : correct rejection	<i>c+d</i> : no fcsts
		<i>a+c</i> : yes obsvd	<i>b+d</i> : no obsvd	<i>N</i> : Total forecasts
		Marginal of Obs		Marginal of Fcst

APCC MME 2m temperature

● Forecast skill (HSS)

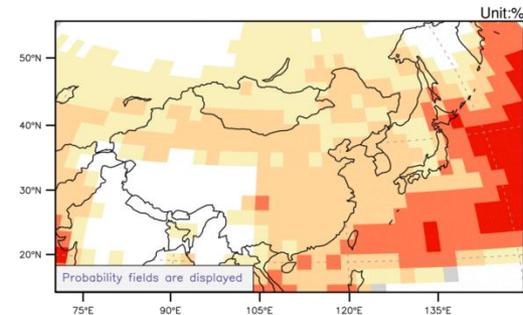

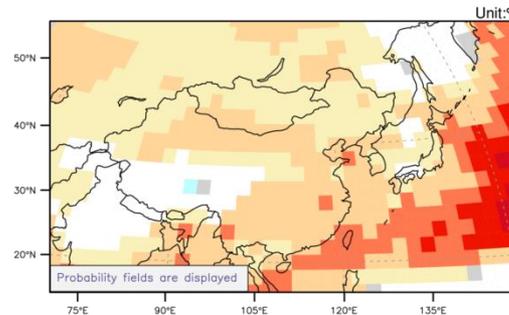

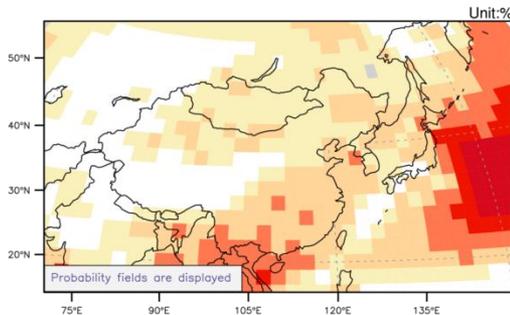

Best skill Tropics, Ocean
No skill China land in DEC, but skilfull in FEB
DEC Arctic contribution to EA is not predictable
 Temperature at 2m for DEC 2018

Temperature at 2m for JAN 2019

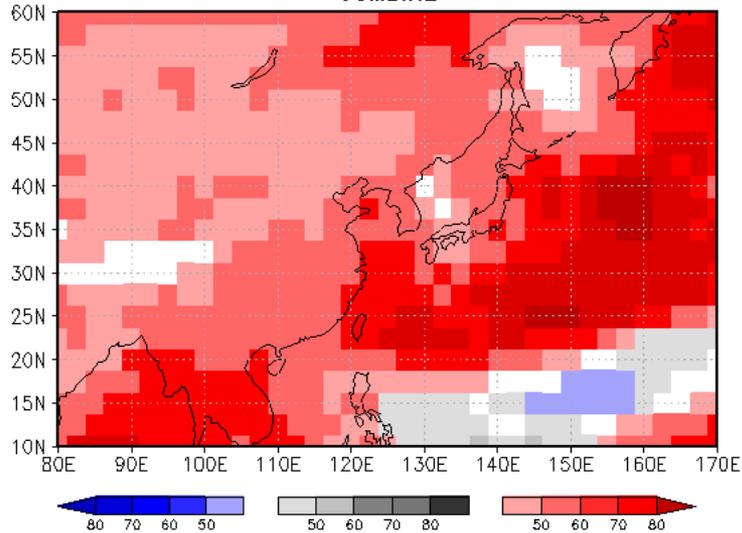

Temperature at 2m for FEB 2019

WMO LC 2m temperature

DJF T2m

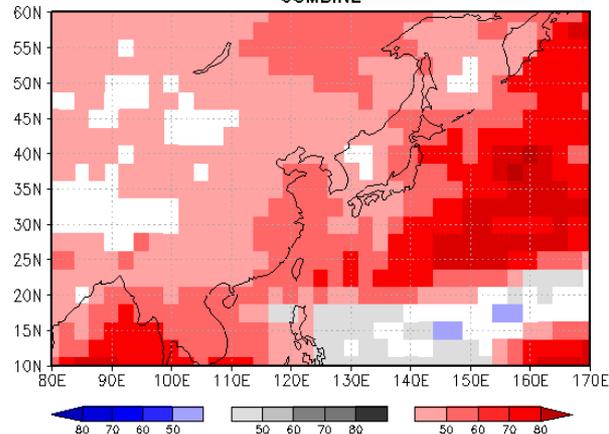

beijing/cpctec/ecmwf/exeter/melbourne/m
COMBINE

- Similar with those from APCC MME
- Warm East Asia
- Cold sub-tropical western Pacific
- Warmer FEB, roughly

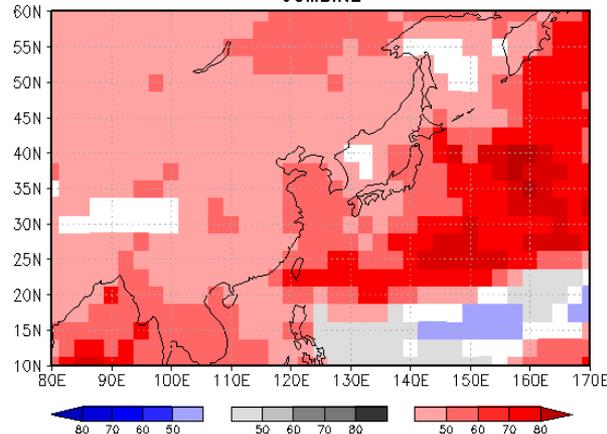

DEC T2m

beijing/cpctec/ecmwf/exeter/melbour
COMBINE

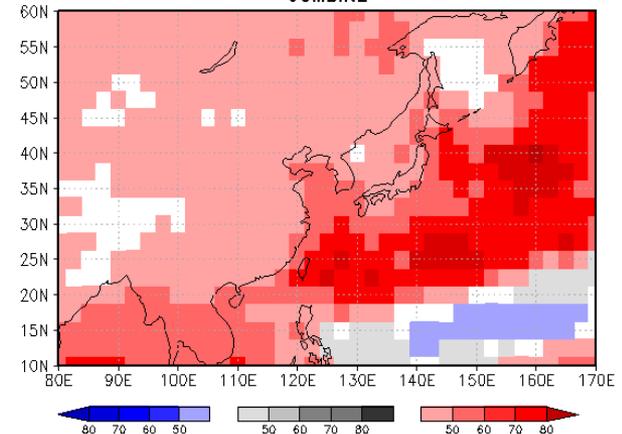

JAN T2m

beijing/cpctec/ecmwf/exeter/melbour
COMBINE

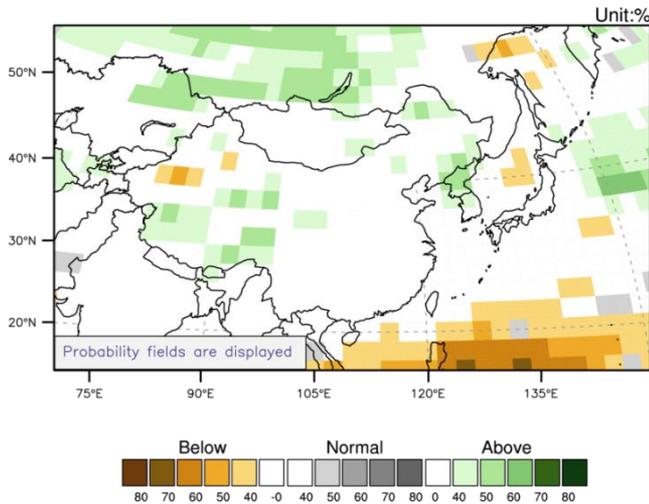

FEB T2m

beijing/cpctec/ecmwf/exeter/melbourne/m
COMBINE

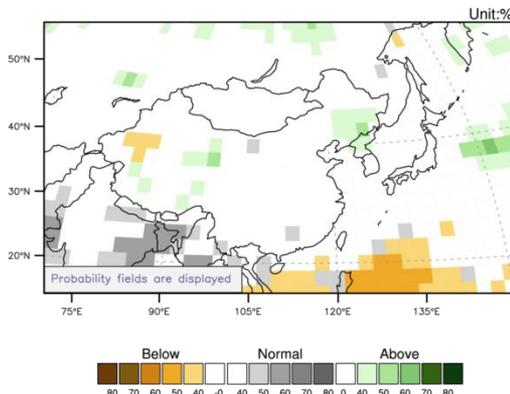

APCC MME Precipitation

Precipitation for December 2018-February 2019

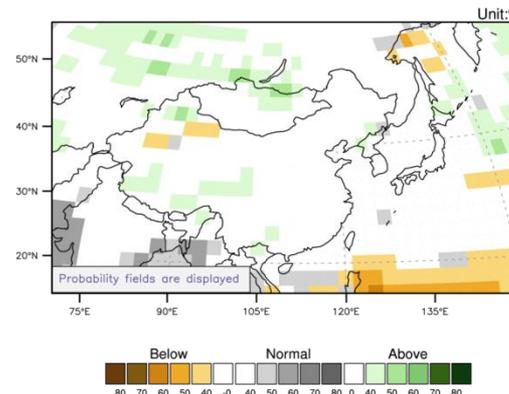

- Dry over sub-tropical western Pacific
- Anti-cyclonic circulation in western Pacific, El Nino
- Wet in some part of western China, North Korea, north eastern China
- Wetter Dec, Drier Feb

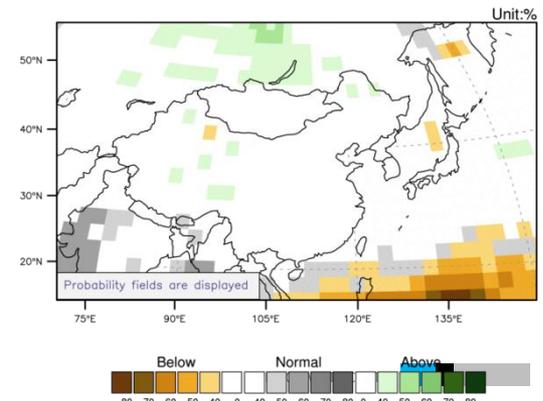

Precipitation for DEC 2018

Precipitation for JAN 2019

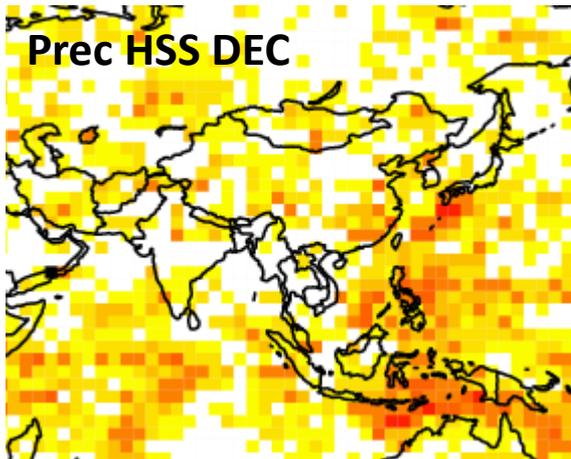

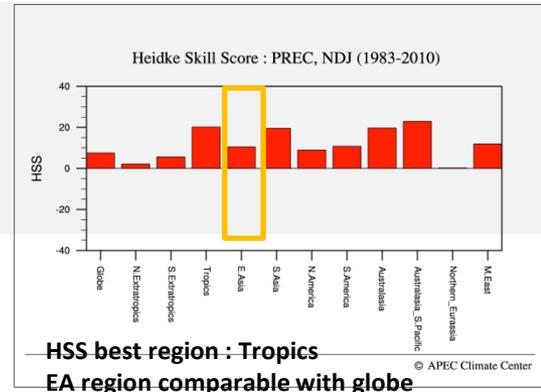

Precipitation for FEB 2019

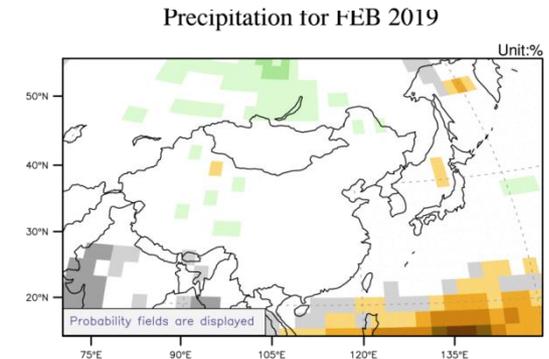

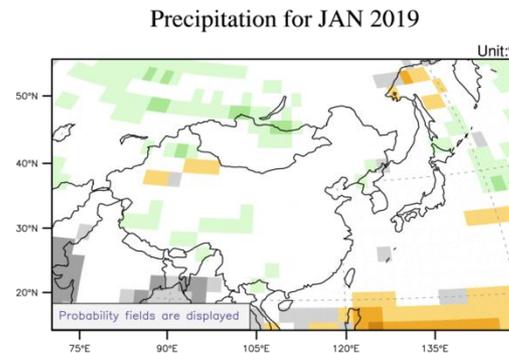

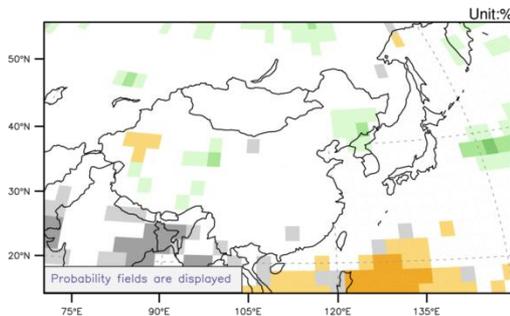

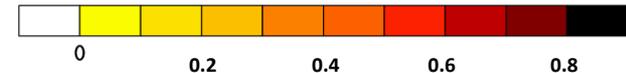

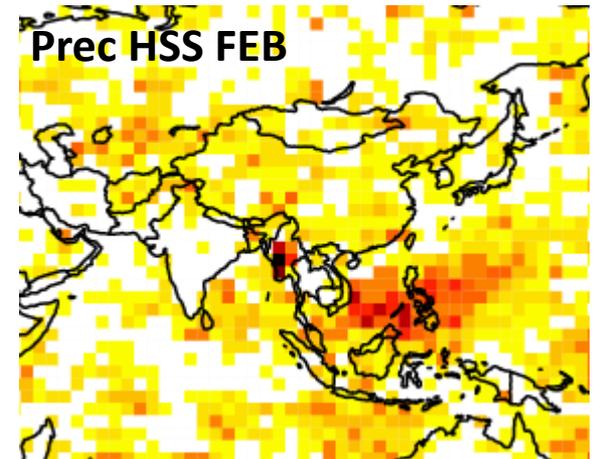

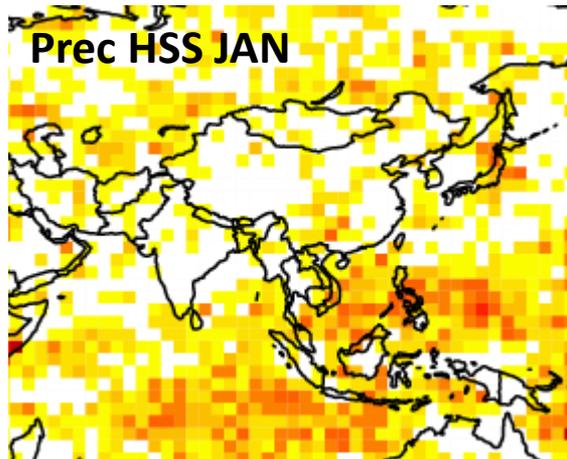

APCC MME Precipitation

● Forecast skill (HSS)

Poor than temperature
Best skill Tropics/Sub-tropics, Ocean
No skill China land in JAN but good in DEC, FEB
Precipitation for DEC 2018

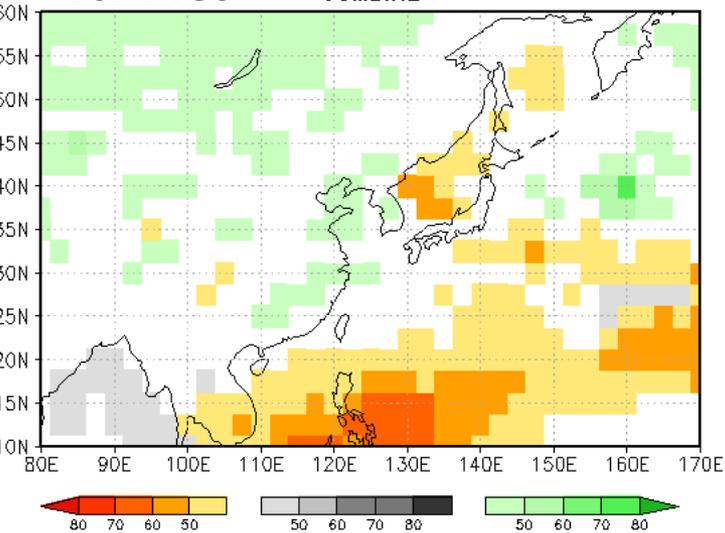

WMO LC Precipitation

- Similar with those from APCC MME
- Dry over sub-tropical western Pacific
- El Nino like circulation pattern in western Pacific
- Wet in some part of western China, Korea, eastern China
- DEC wetter, FEB drier

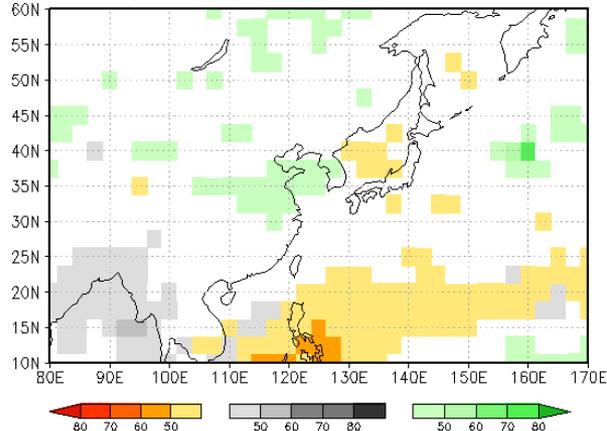

DJF Prec

beijing/cptec/ecmwf/exeter/melbourne/r

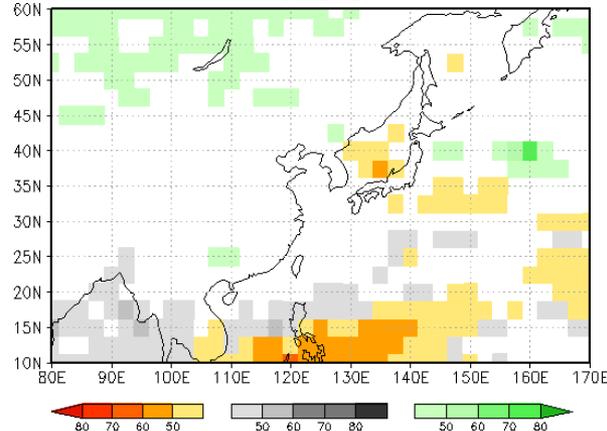

DEC Prec

beijing/cptec/ecmwf/exeter/melbourne/r

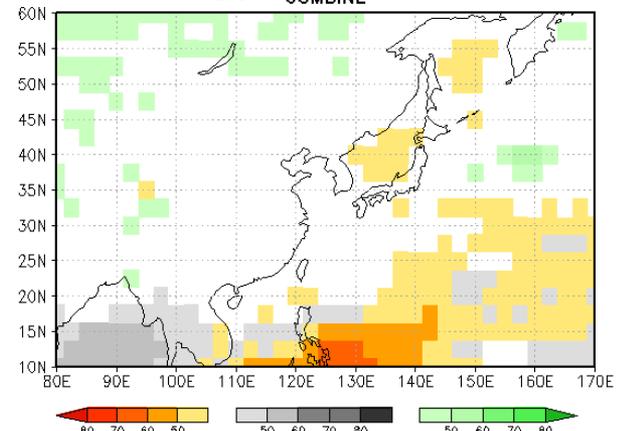

JAN Prec

beijing/cptec/ecmwf/exeter/melbourne/r

FEB Prec

beijing/cptec/ecmwf/exeter/melbourne/r

Summary

- **ENSO**
 - DJF weak El Nino
 - Dry sub-tropical western Pacific, Neutral-wet tropical eastern Pacific
- **T2m**
 - East Asia warming (Mongolia, China except west southern part, Korea, Japan)
 - El Nino response
 - Consistent warming DJF, slight warmer February
 - Be careful the Arctic warming
- **Precipitation**
 - Dry sub-tropical western Pacific, Wet some part of western China, North Korea, north eastern China
 - El Nino response
 - Consistent dry in sub-tropical western Pacific; slight drier FEB

Thank You
