

Current status and future plan of climate services in China

Yuping Yan

Beijing Climate Center, CMA

Nov. 8, 2017

Outline

- **Climate Services in China**
- **Future Development**

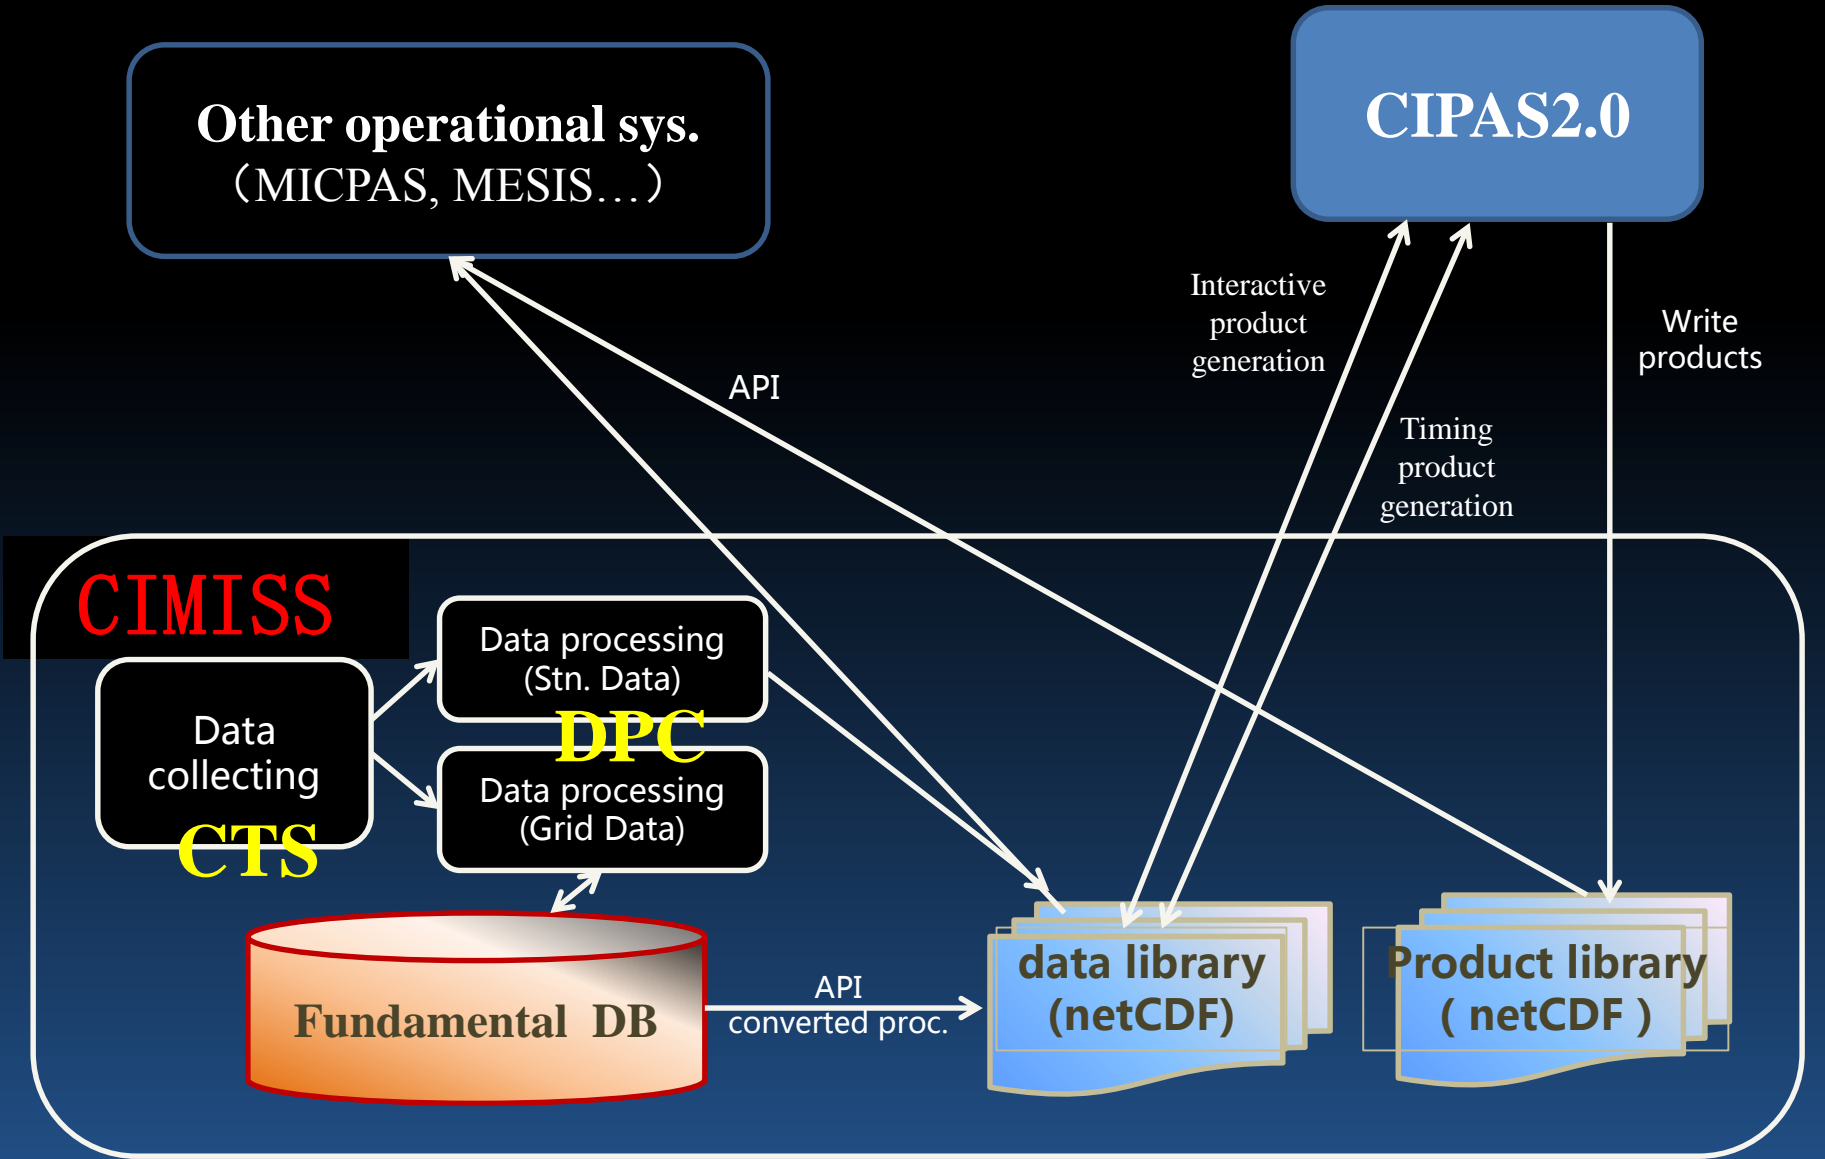

What's the climate information?

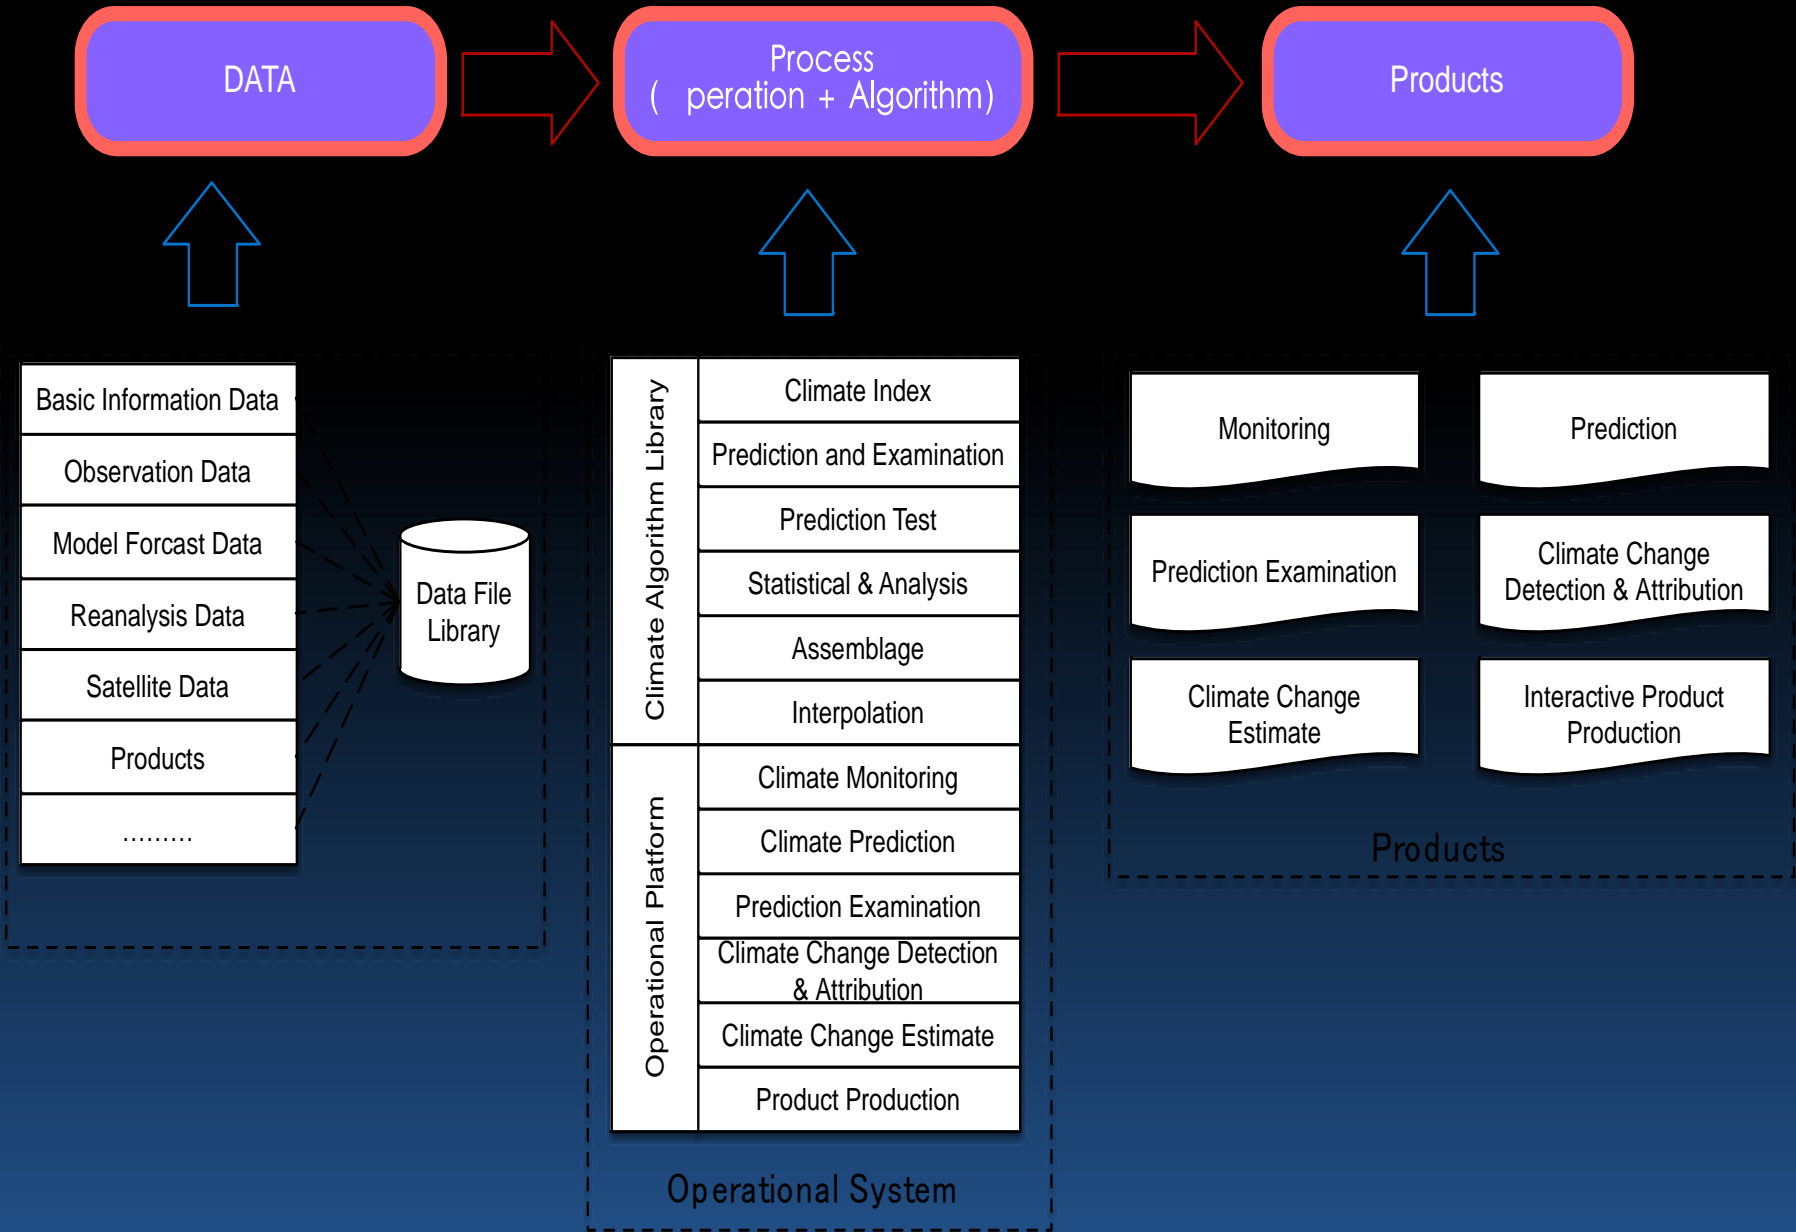

- Climate data
- Climate products
- Climate knowledge

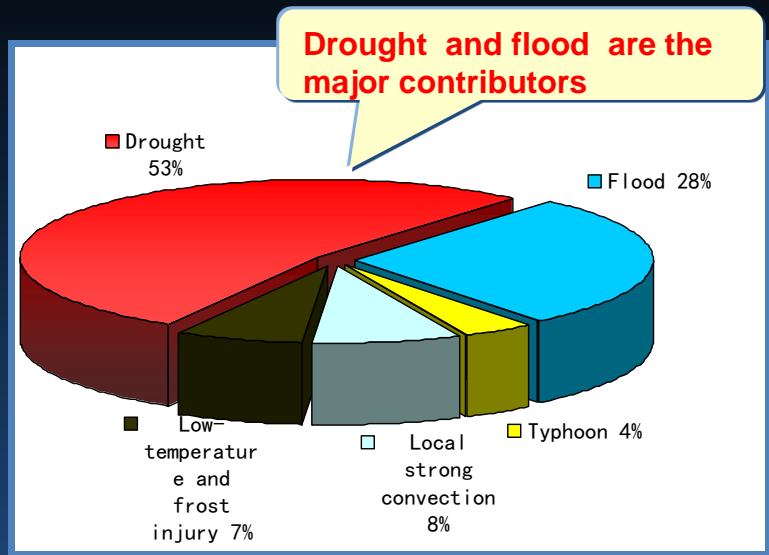

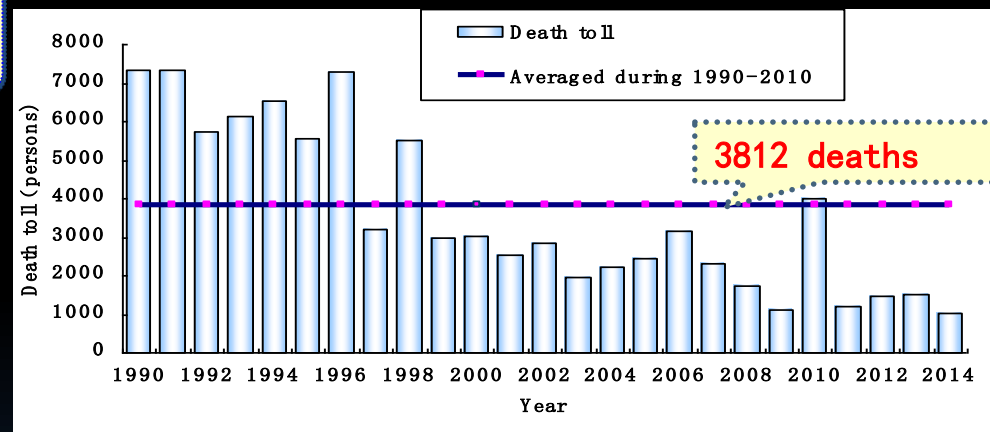

Climate data

What is CIPAS 2.0

Meteorological disasters occur frequently with great losses in China .

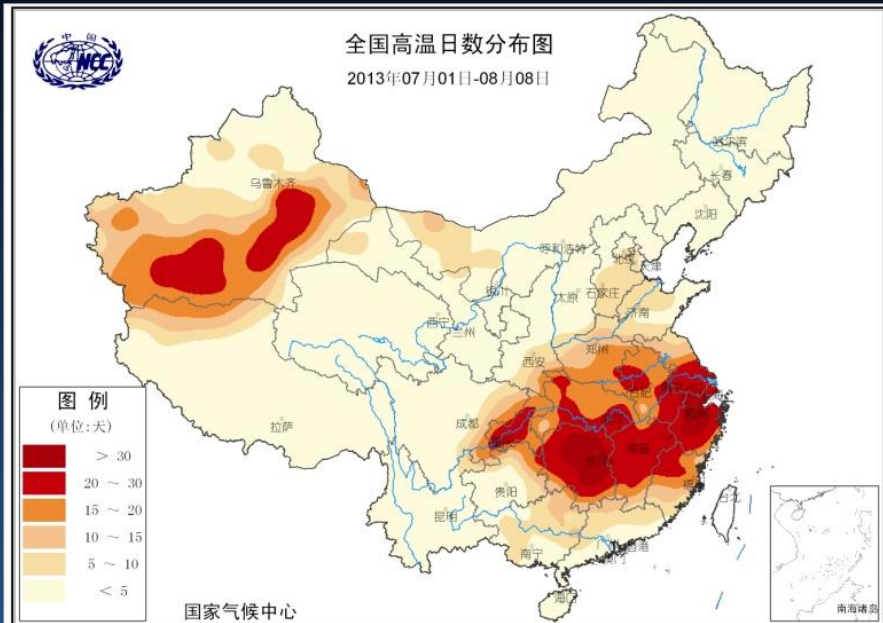

Climate Monitoring

The strongest heat wave in 2013

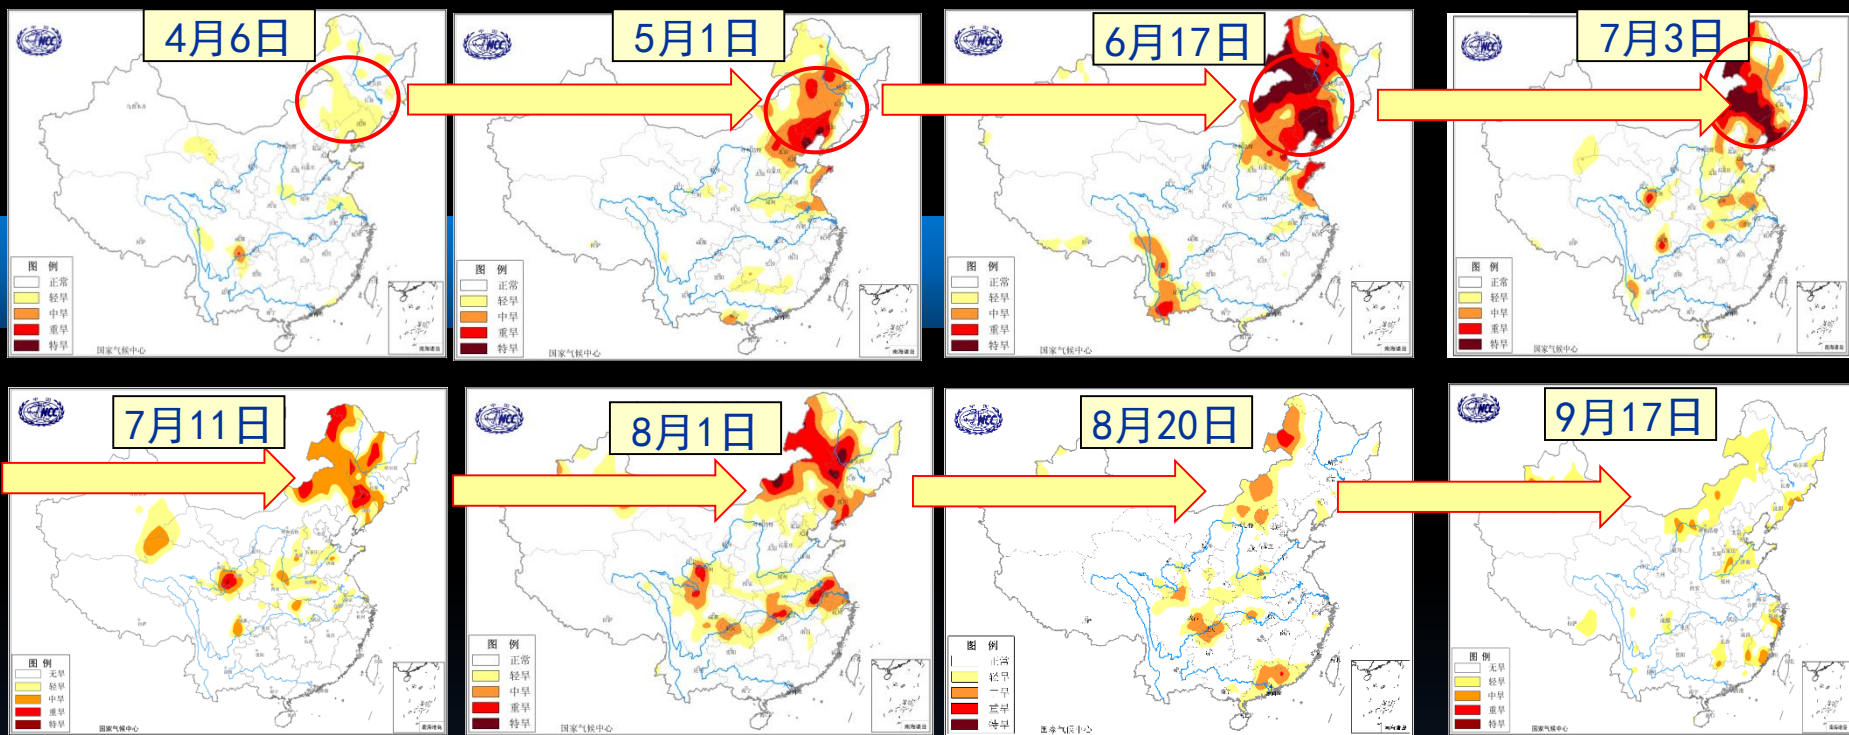

- ✓ Mean high temperature($>35^{\circ}\text{C}$) days was the most from 1951
- ✓ 19 provinces hit heat wave
- ✓ 98 stations broke the records of max temperature

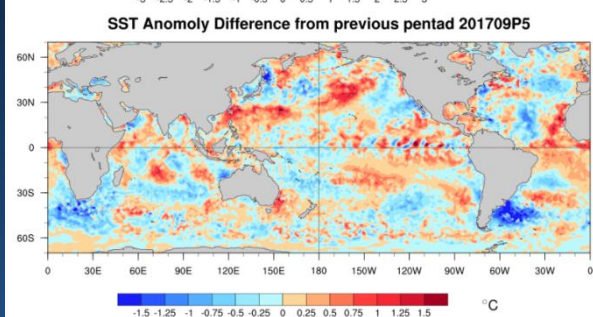

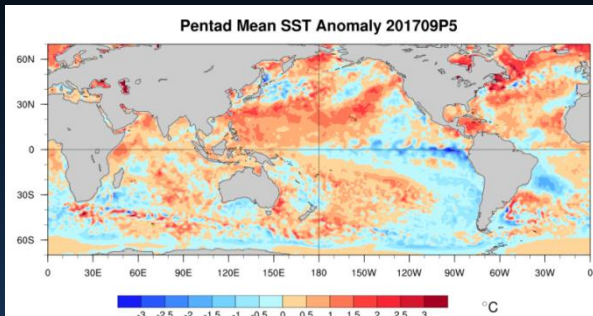

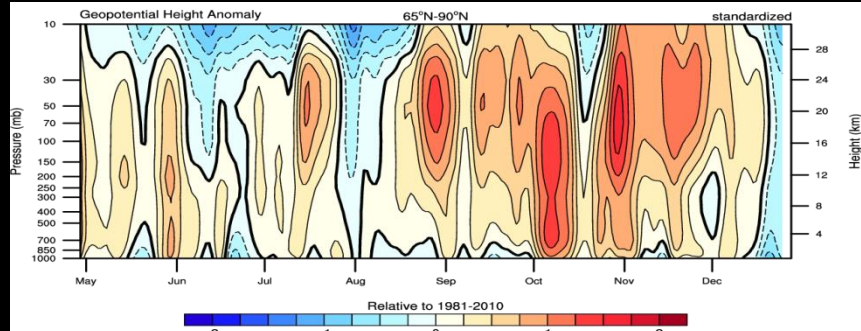

High temperature days in 2013

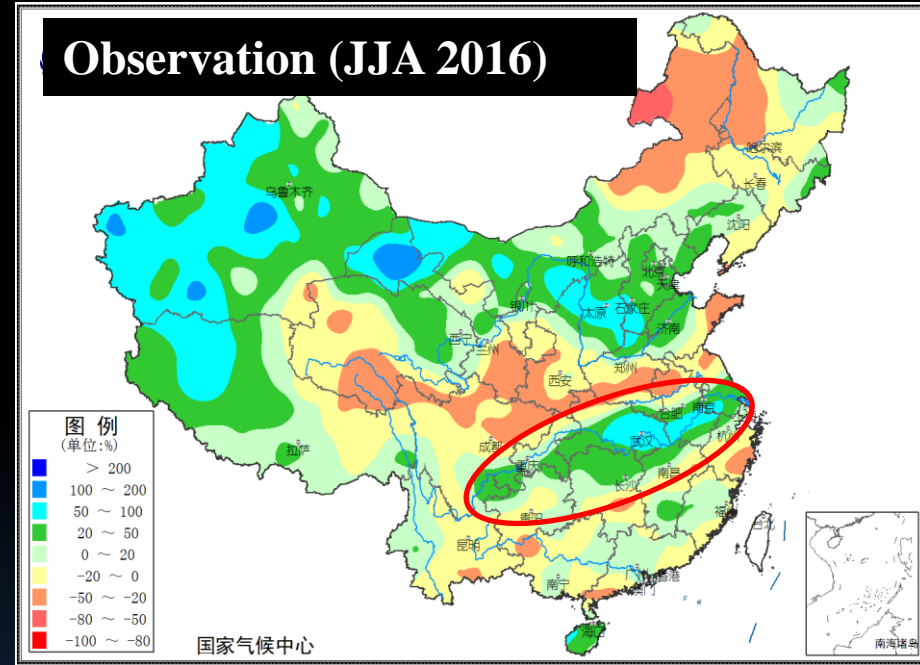

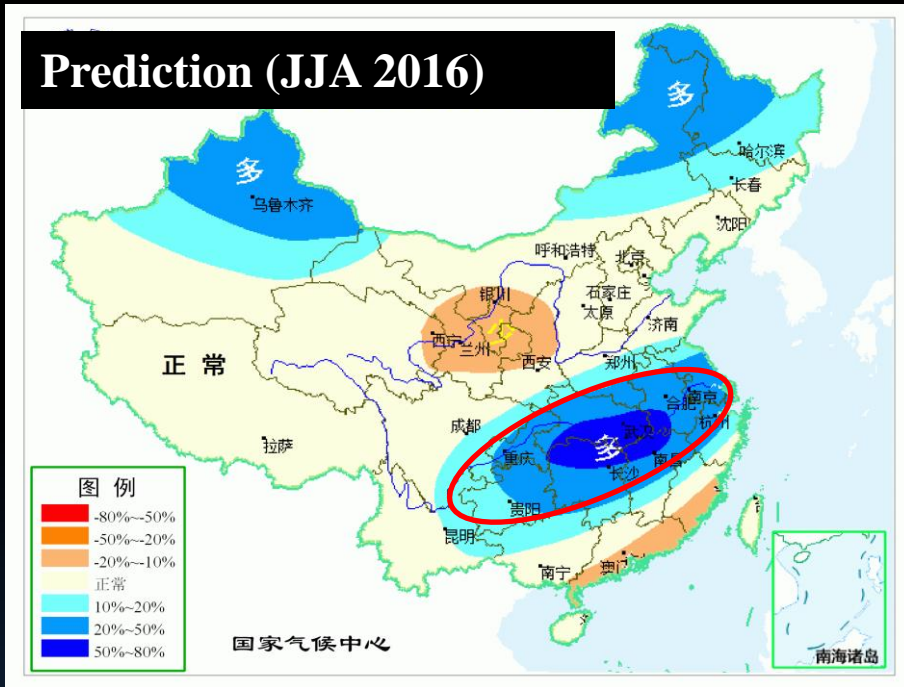

High temperature area in 2013

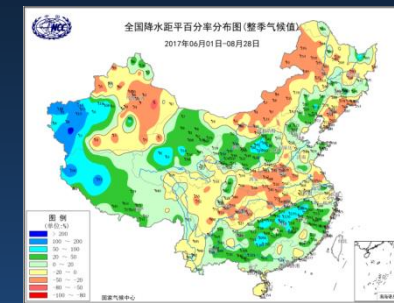

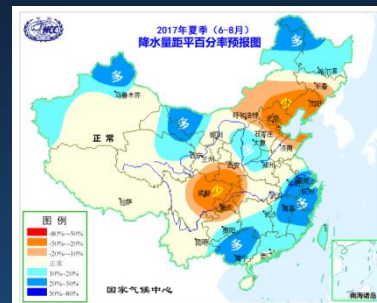

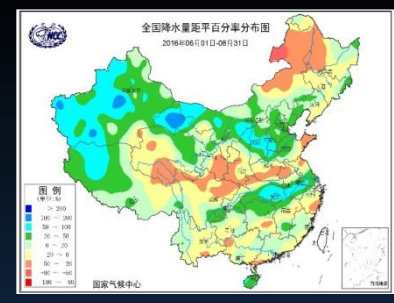

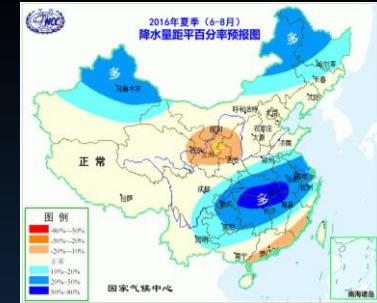

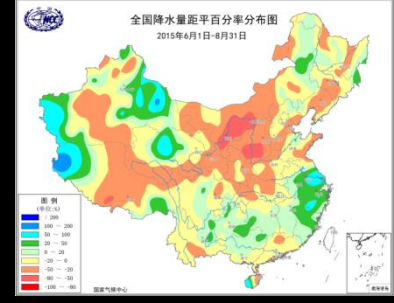

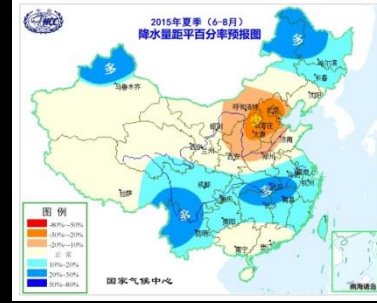

Climate Prediction(seasonal)

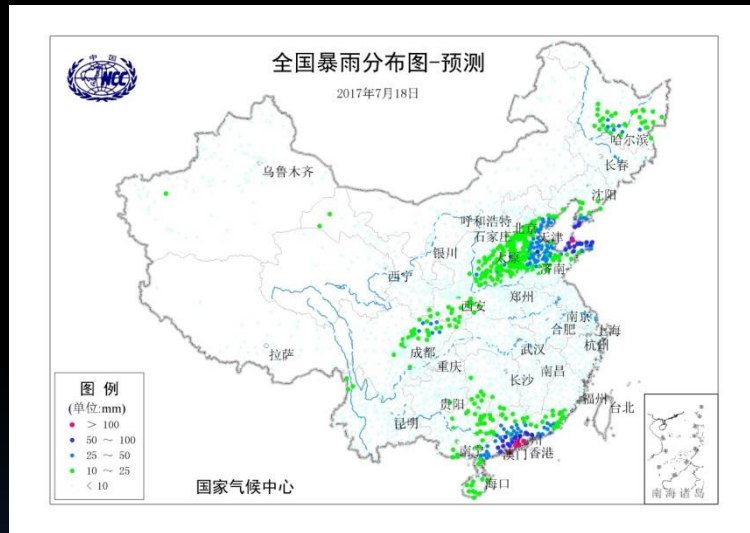

Climate Prediction(monthly)

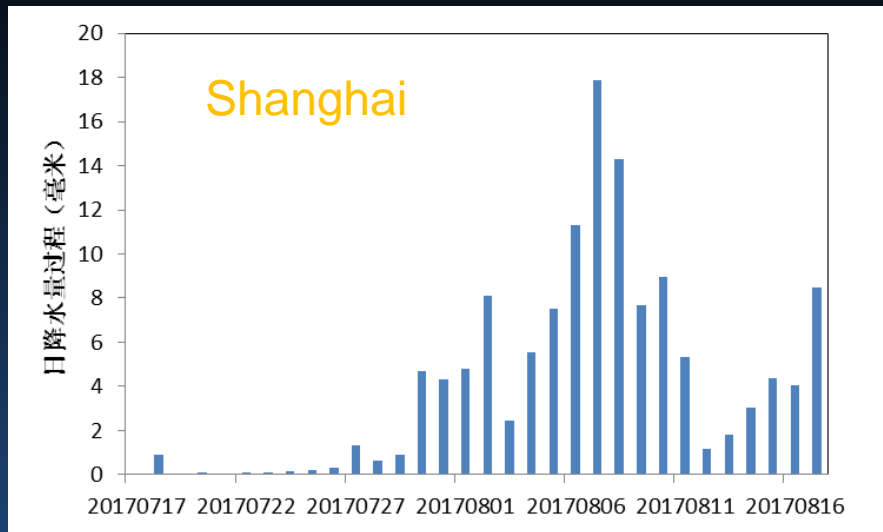

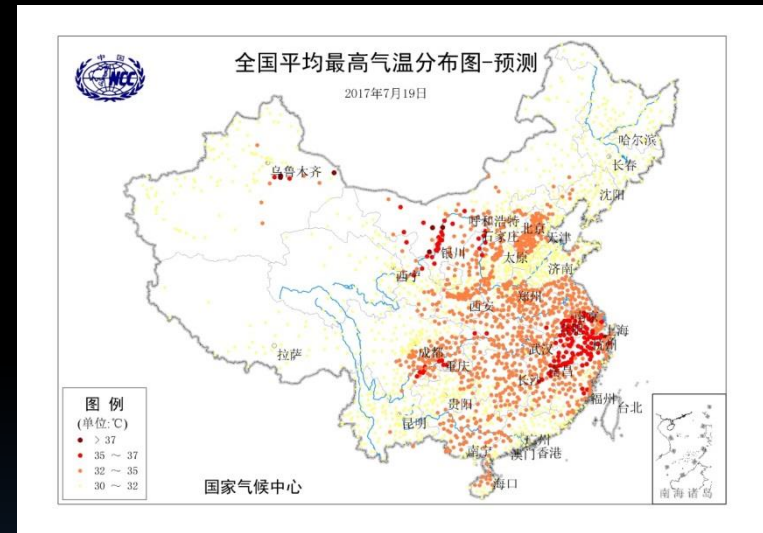

Weather Process prediction of rainstorm and heat wave

Rainstorm prediction

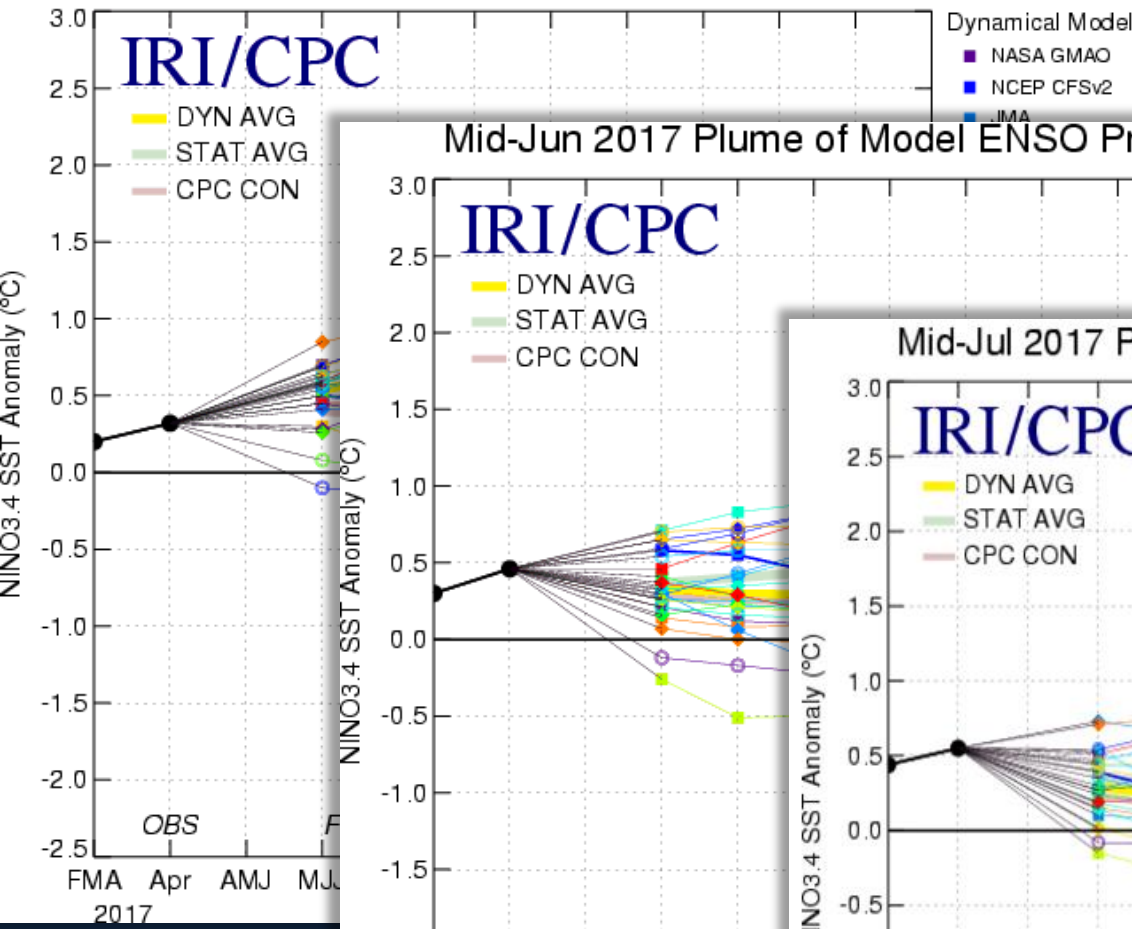

Maximum. Temperature

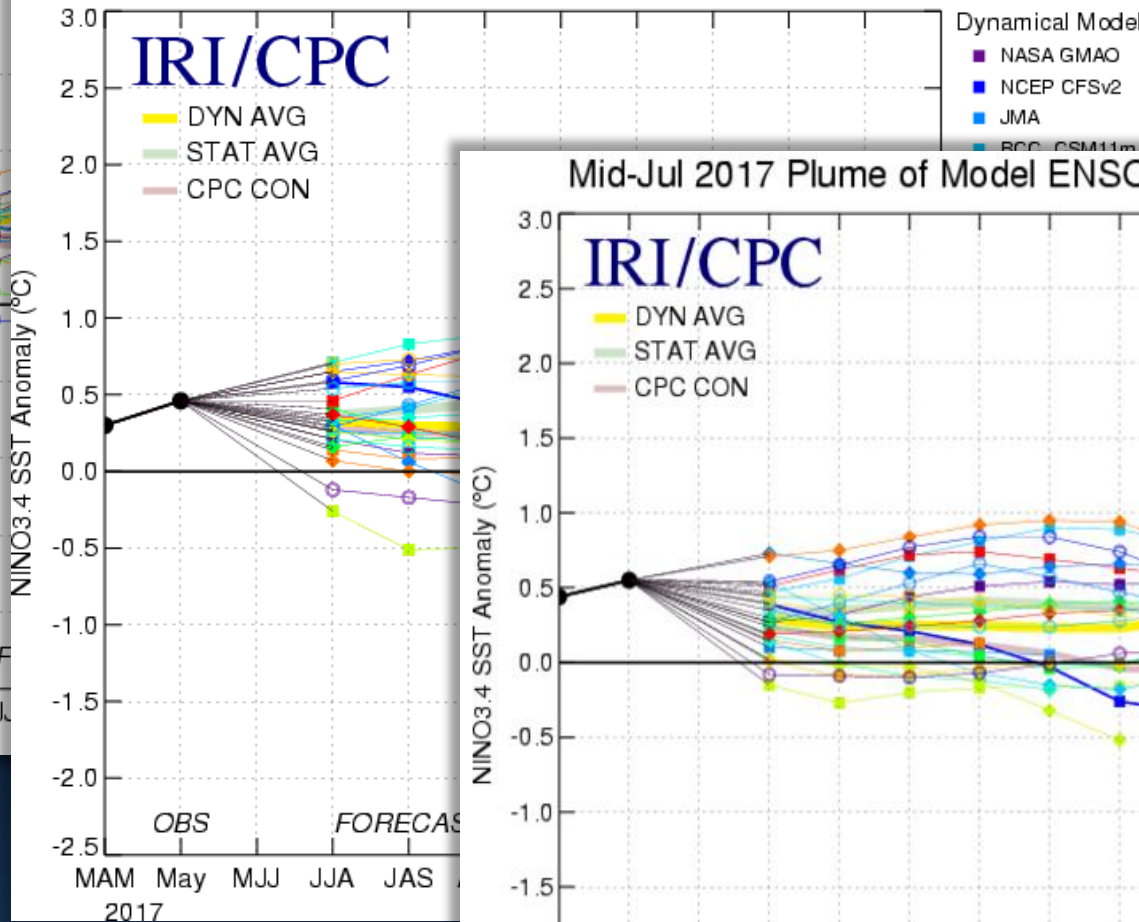

Daily running-forecast for Rainstorm and high temperature process in the next 30 days

Mid-May 2017 Plume of Model ENSO Predictions

Mid-Jun 2017 Plume of Model ENSO Predictions

Mid-Jul 2017 Plume of Model ENSO Predictions

- RMM指数空间位相图 (过去45天监测与最近10天预报检验)
- RMM指数空间位相图 (过去45天监测与最近20天预报检验)
- 年度实时预报技巧检验 (距平相关系数、均方根误差、均方技巧评分)

- T639+FYB+BCC_AGCM2.2
- T639+FYB+BCCCSM1.2
- T639+FYB+T639
- 集合
- NCEP+BCC_AGCM2.2
- NCEP+BCCCSM1.2

时间: 2017 - 6 - 28 开始检索

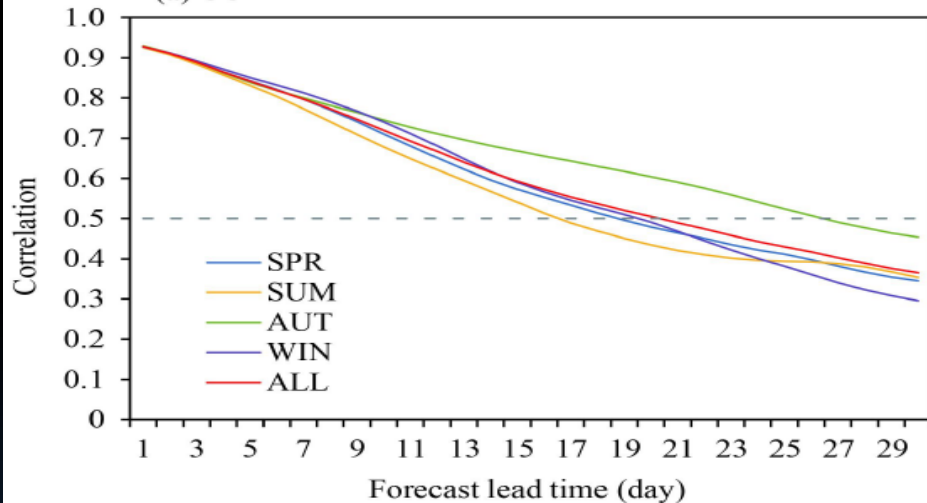

MJO Phase Diagram [RMM1, RMM2]: Model Forecast Verification

Monitor (T639+FYB): 20170515-20170628
 Forecast (BCC_AGCM2.2): 20170619-20170628

Phase 7 (Western Pacific) Phase 6

Climate Knowledge

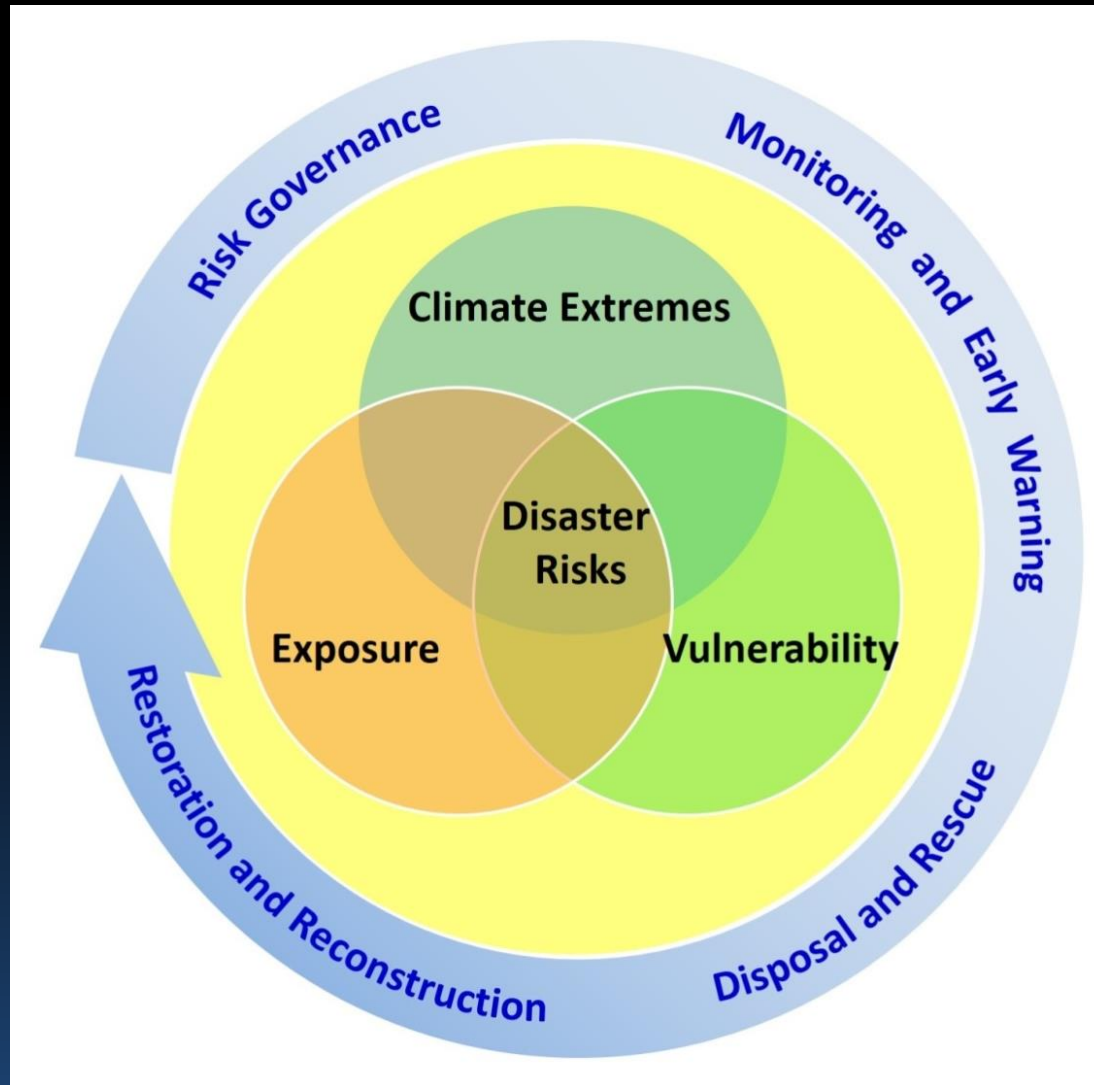

- ◆ National Assessment Report On Climate Change
- ◆ Green Book On Climate Change
- ◆ Climate Change Monitoring Bulletin
- ◆ Regional Assessment Report On Climate Change
- ◆ Climate Change Projection Dataset For China Region
- ◆

Climate services---CFCS

Practice 1: Disaster Risk Reduction

In this circle chain different users need different climate services.

Working Mechanism for DRR

DRR Management

Government Leadership

- Organizing and coordinating meteorological disaster prevention and mitigation
- Providing fund support for infrastructure and disaster relief

Inter-Sectors Coordination

- Ensuring the inter-sectors emergency response and interaction based on meteorological disaster warning signals.

Community participation

- Emphasizing the involving of community, NGOs and volunteers
- Improving training for the public

Practice 2: Water Resources

VIC –National scale

Hydrological modeling for different temporal-spatial scale

VIC (Variable Infiltration Capacity)

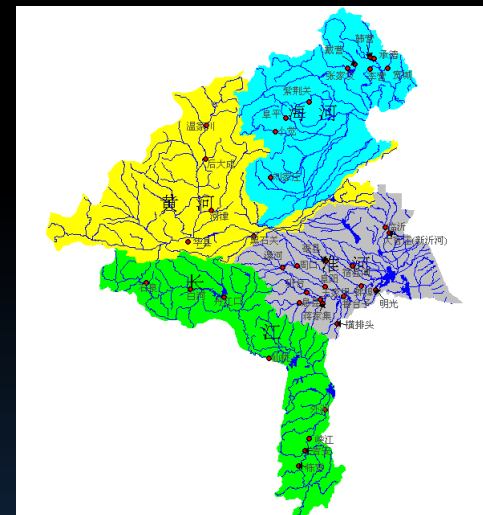

HBV Model

Monthly Water Balance Model

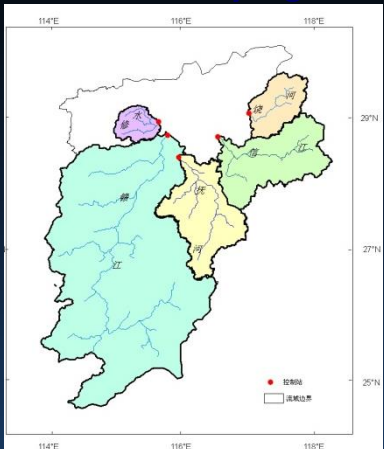

SWAT (Soil Water Assessment Tool)

Floodarea Model

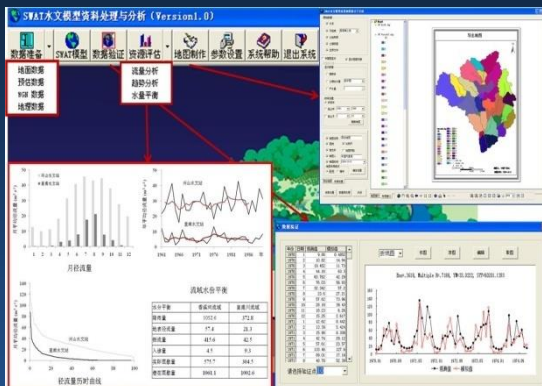

Monthly Water Balance Model - Four main river basin

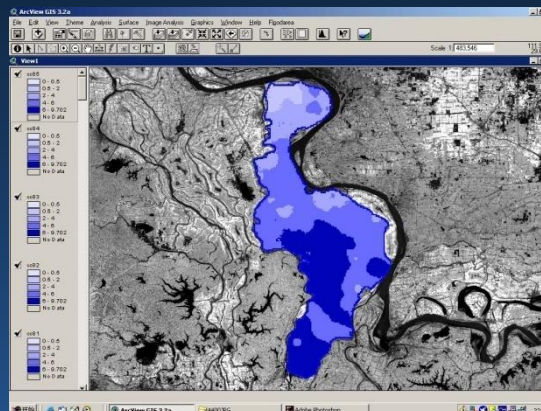

HBV model-Poyang Lake

SWAT: Key mesoscale watersheds

Flood area model-delineation of flooded areas

Pilot Project

Climate Service for Three Gorges Reservoir

Dedicated server

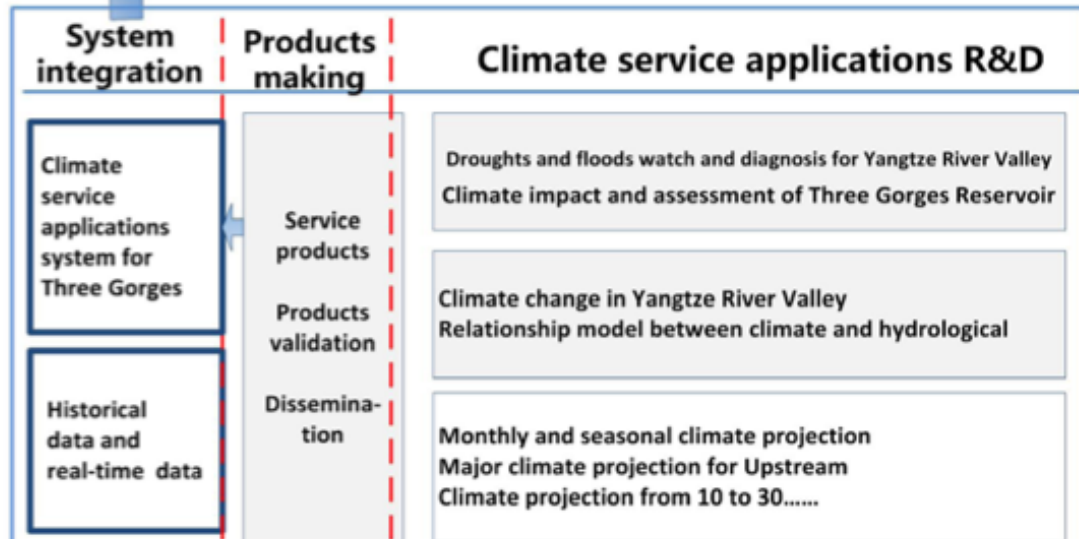

Products push

Service requests

Meteorological clients

Hydrological clients

Others

Feedbacks

Climate service requests analysis of Three Gorges

Decision making of Floods and droughts control
Safe water retention
Scheduling
Ecological water supplement
Impacts of climate change
Public announcements

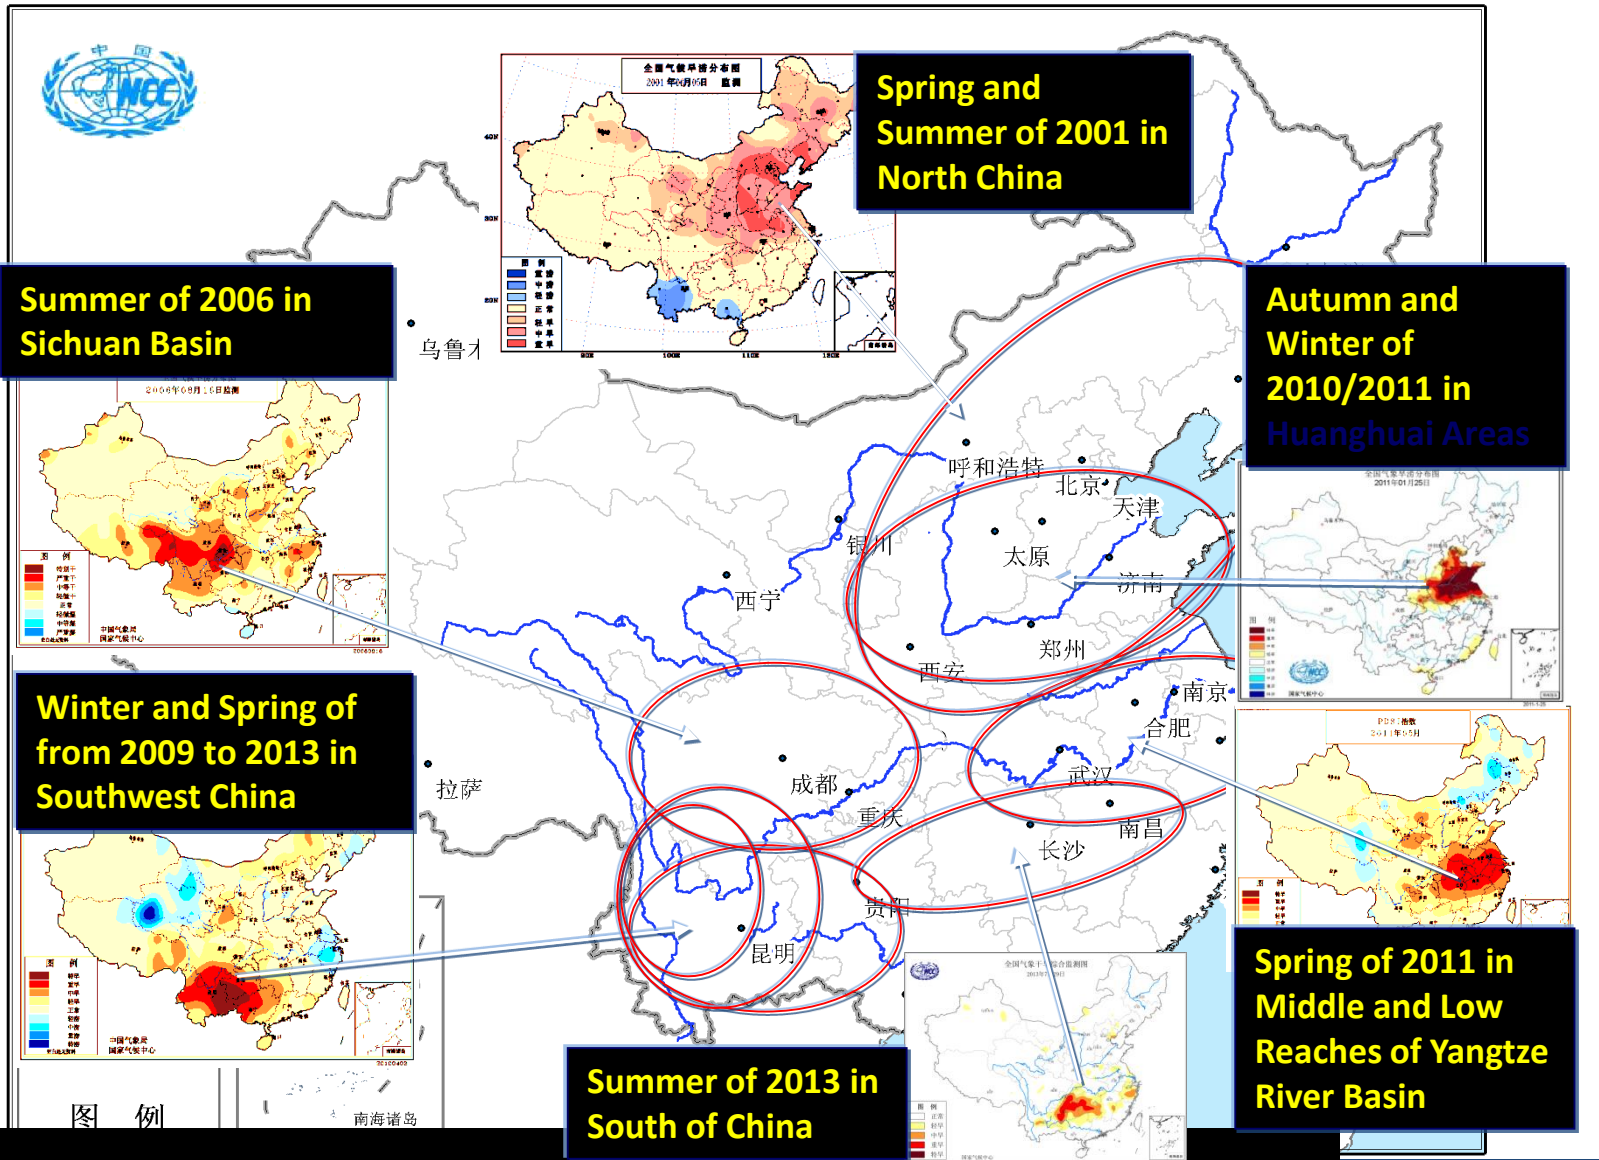

Database servers Firewall

Dedicated network

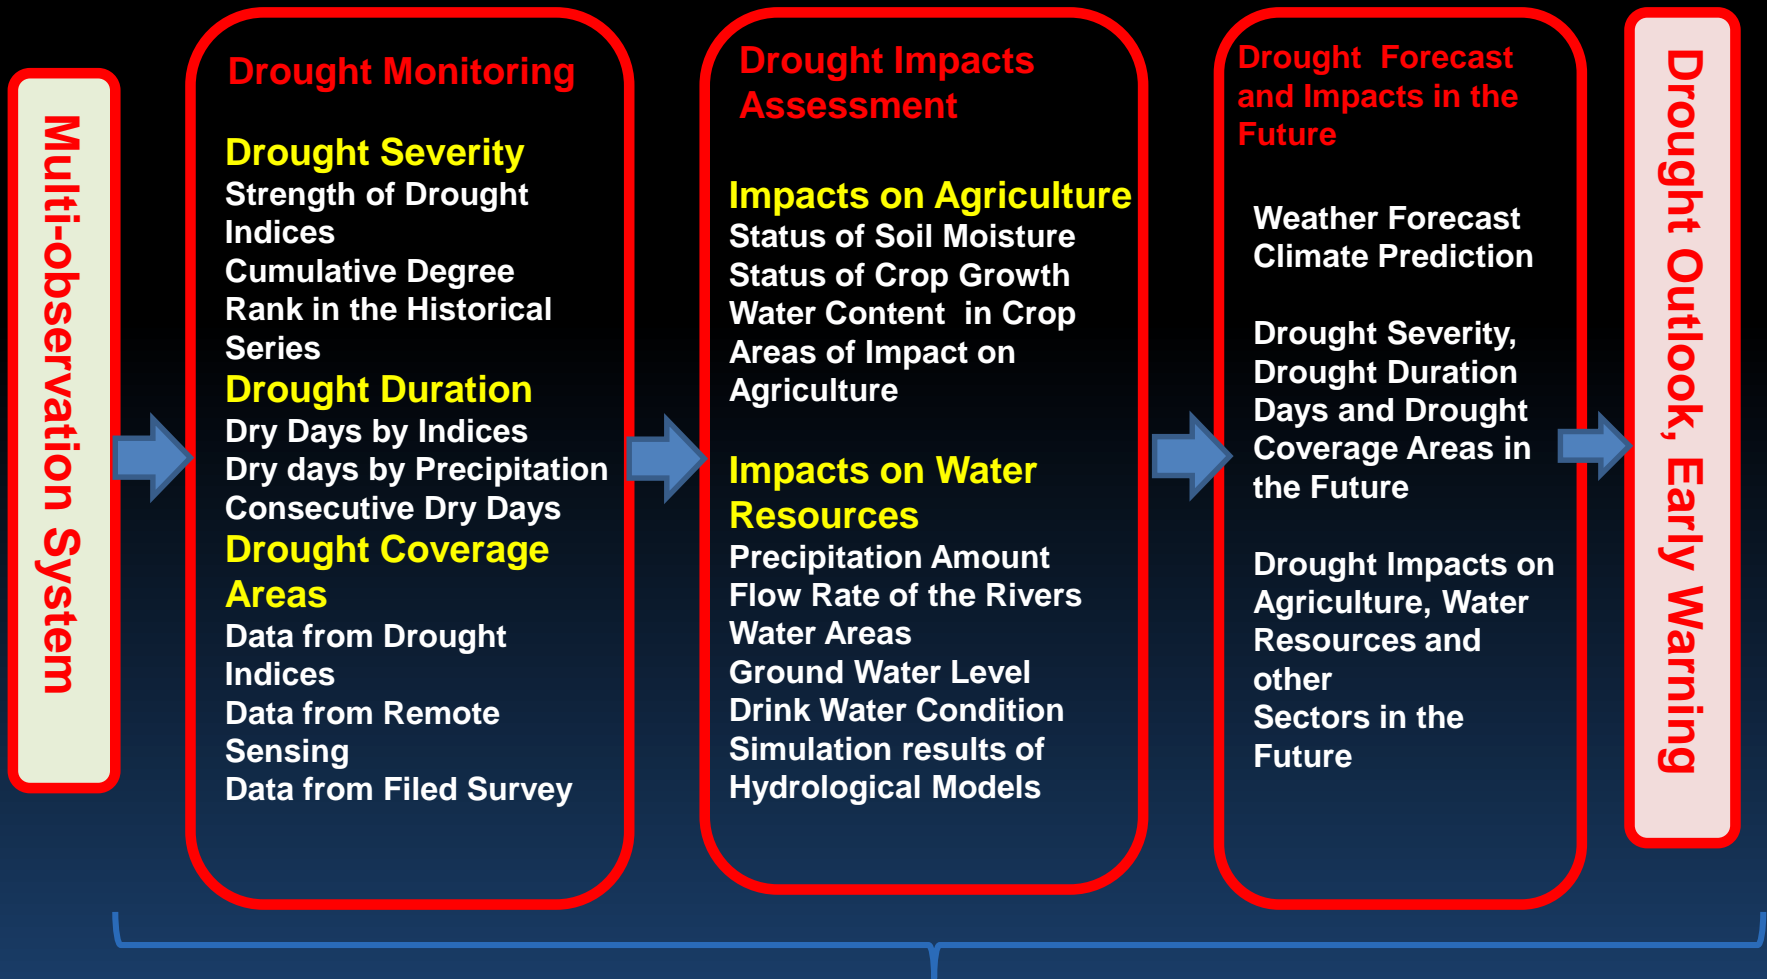

Information of weather monitoring and forecast

Practice 3: Agriculture

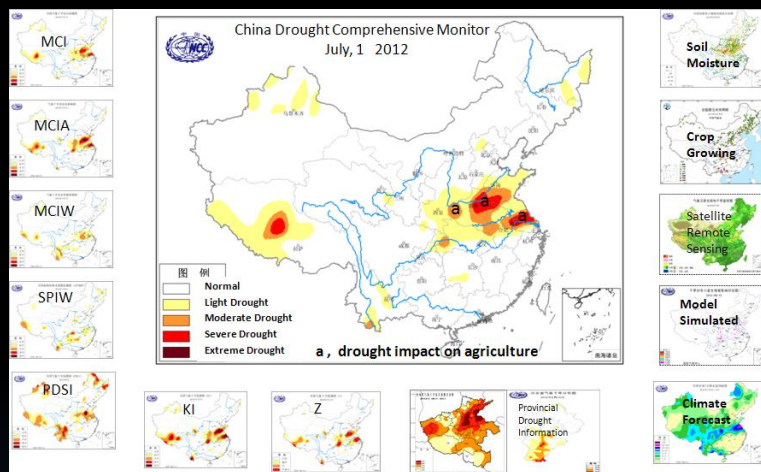

Severe Drought Events Happened in the New Century

Flow Chart of Integrated Drought Monitoring, Assessment and Forecasting

Service for Decision Maker, Farmer and Special Users

Severe Drought in the Summer of 2014 in North China

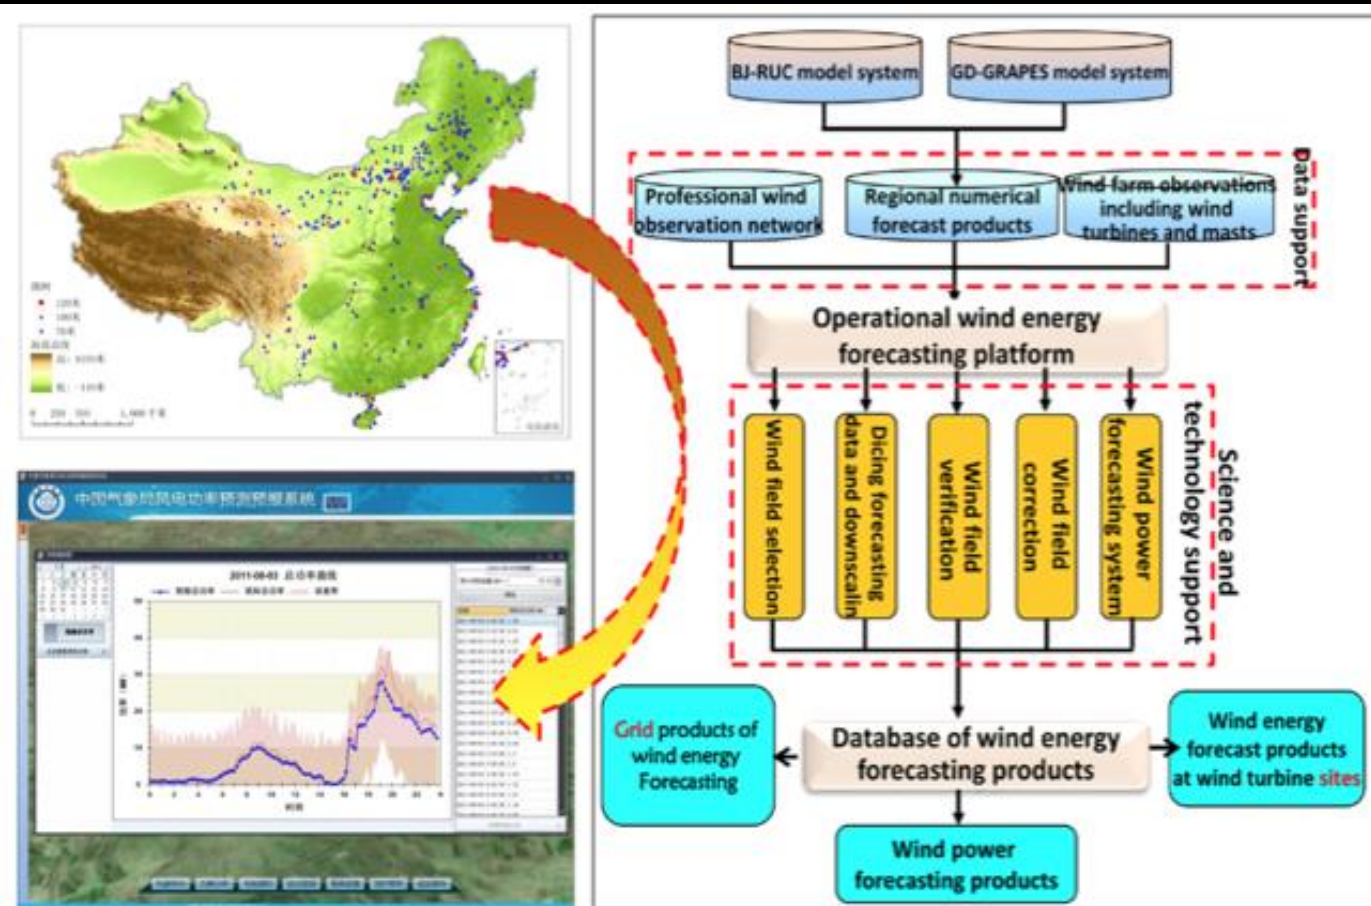

- Drought Monitoring daily
- Provide the drought influence areas daily
- Provide more than 20 drought index, include MCI, SPI, PDSI, Soil Moisture, Satellite Remote Sensing Pictures, etc.
- Issued the drought early warning in Henan, Shanxi and Liaoning provinces.

省份	受灾人口 (万人)	饮水困难人口 (万人)	农作物受灾面积 (万公顷)	农作物绝收面积 (万公顷)	直接经济损失 (亿元)
辽宁	545.9	32.9	188.2	36.7	95.5
河南	1929.9	114.2	216.3	18.6	72.9
吉林	229.3	0.3	94.3	6.2	45
内蒙古	264.8	50.8	124.4	21.9	37.3
山东	542.4	19.5	56.6	7.4	39
陕西	576.2	47.5	53.3	7.3	33.9
湖北	511.9	96.4	73.3	7.6	22
江苏	475.1		35.7	3.4	9.7
四川	362.6	72.3	49.4	4.2	8.8
河北	245.3	0.6	28.8	2.4	8.3
安徽	420.7	8.1	50.4	1.2	7.3
宁夏	75.6	31.1	16.9	1.1	4.7
山西	35.7	0.6	6.6	0.2	1.6
合计	6215.4	474.3	994.2	118.2	386

Practice 4: Energy

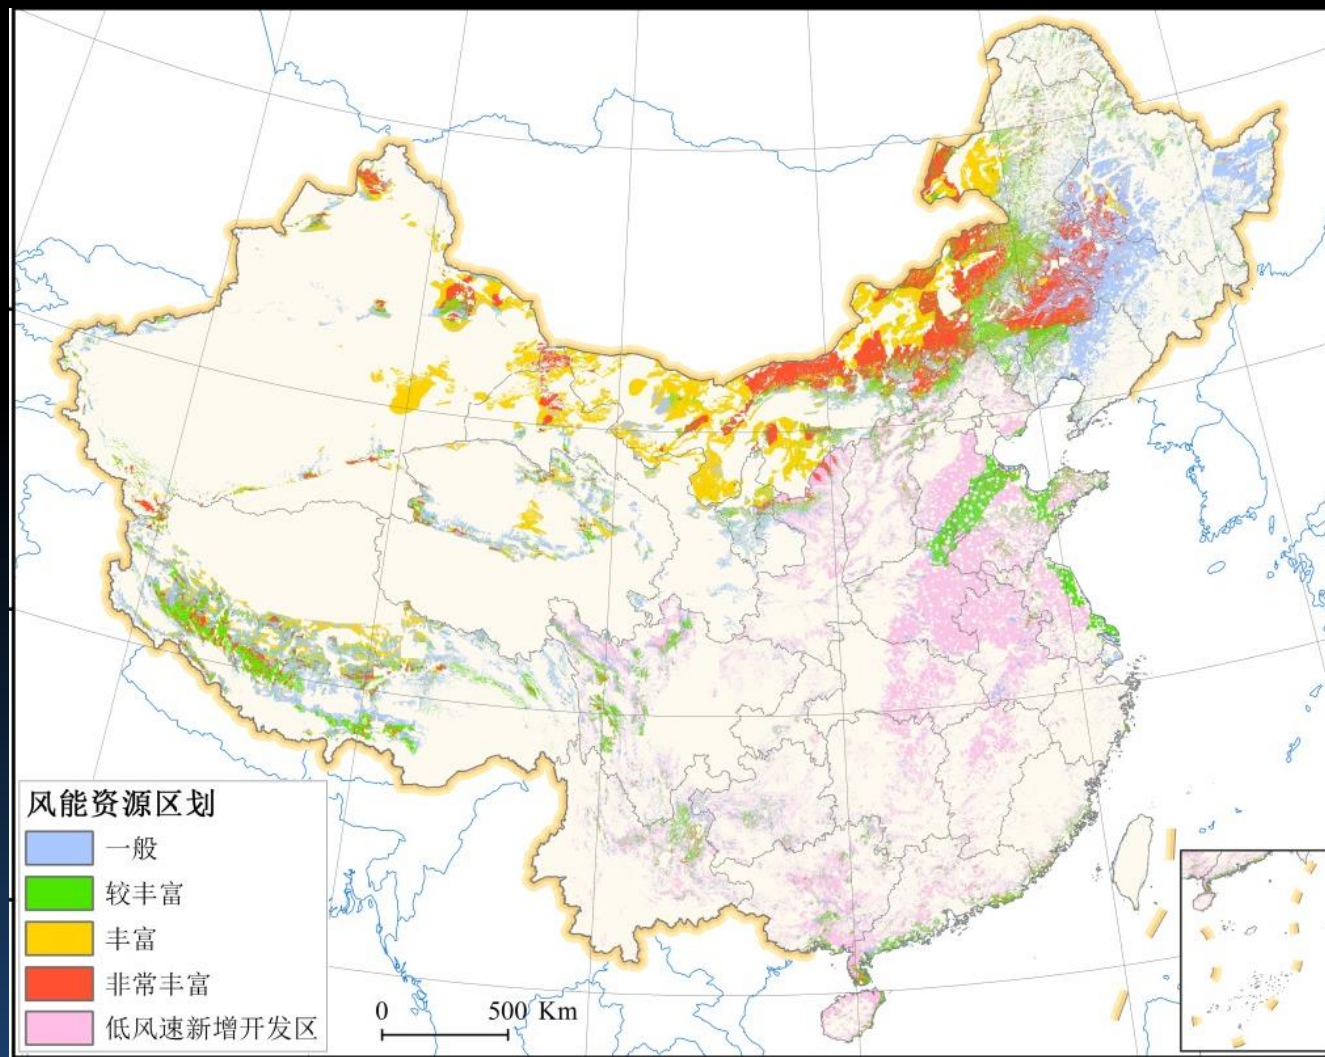

Pilot project: China wind energy resources development and utilization

- To establish observation network,
- To assess distribution of wind energy resources,
- To develop advanced numerical model,
- To build up the wind power forecasting system,
- To support wind power scientific scheduling and safe operation of the power grids.

Figure 4 Climate service for wind energy resource development and utilization

Wind energy distribution in China

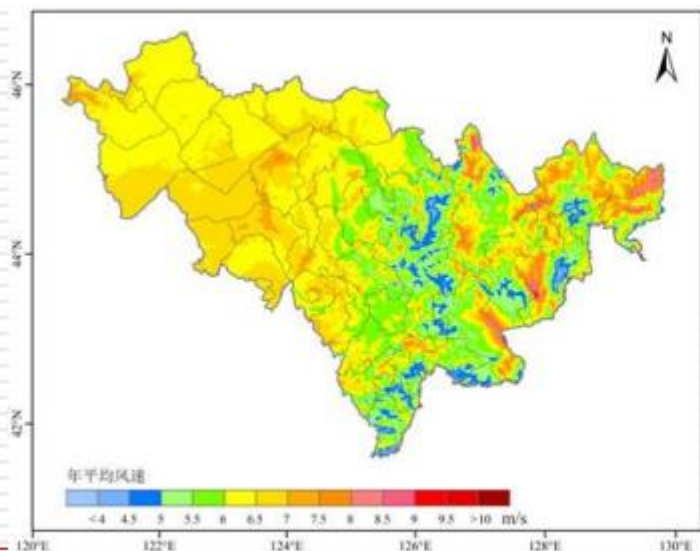

The total technical development capacity of wind energy at 80m reaches 35 billion KW in China

全国2850个县级行政区域
 水平分辨率1km*1km
 30年（1979-2008）平均值
 任意高度

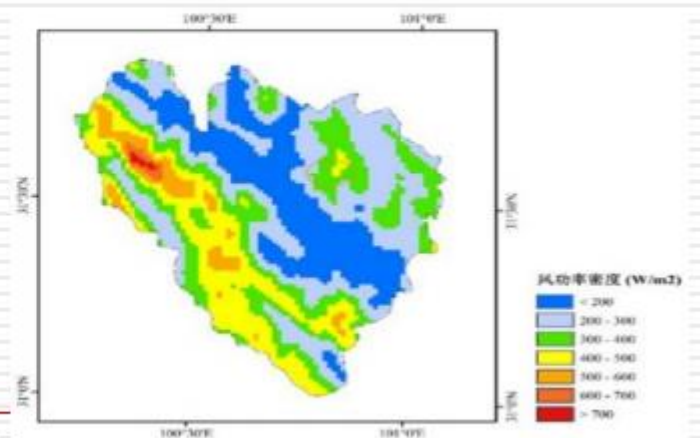

80米高度张北县可利用风能资源分布

80米高度吉林省平均风速分布图

80米高度四川炉霍县平均风功率密度

Practice 5: Climate Risk Indices in China

Annual Climate Risk Index

Monthly Climate Risk Index

Food CPI month-to-month & Frozen index

Frozen index prediction

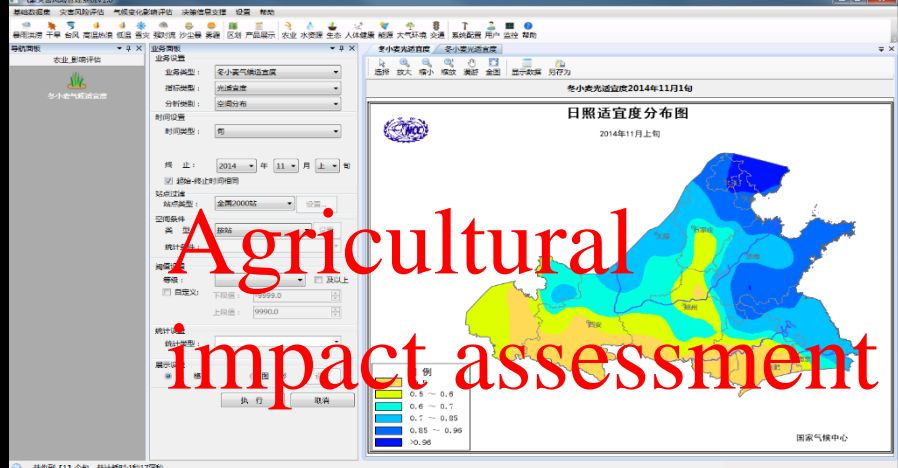

Prediction

Climate impact assessment system: to 7 sectors

Module name	Algorithm name	Main Contents
Agricultural impact assessment	13 modules	<ul style="list-style-type: none"> ① Agricultural growing season ② Climate suitability ③ Utilization rate of the climate resources ④ Accumulated temperature ⑤ EPIC model, etc.
Water resources assessment	A total of 7 modules	<ul style="list-style-type: none"> ① Annual precipitation resources ② Top 10 watershed precipitation resources ③ Three-level basin precipitation resources ④ Water regime, etc.
Ecosystem assessment	A total of 5 modules	<ul style="list-style-type: none"> ① Soil potential productivity ② NDVI/EVI, etc.
Human health	A total of 9 modules	<ul style="list-style-type: none"> ① Comfort index, etc.
Energy impact assessment	A total of 10 modules	<ul style="list-style-type: none"> ① Wind energy ② Cooling energy consumption, etc.
Atmospheric environmental impact	A total of 10 modules	<ul style="list-style-type: none"> ① Atmospheric environmental capacity ② Air quality index ③ Data query of PM2.5, etc.
Traffic impact	A total of 2 modules	<ul style="list-style-type: none"> ① Unfavorable traffic days, etc.

9 hazards

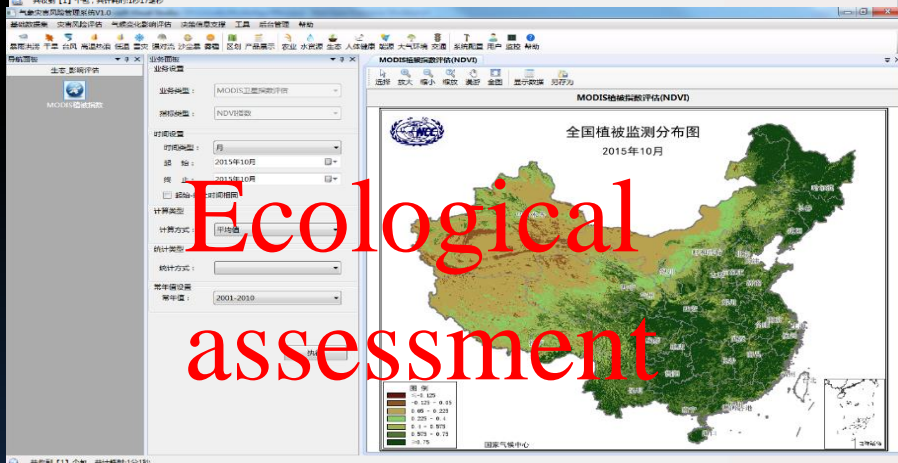

Module name	Algorithm name	Main Contents
Rainstorm flood	A total of 33 modules	<ul style="list-style-type: none">① Precipitation analysis: single day precipitation, cumulative precipitation, number of precipitation days, number of precipitation stations, day of the precipitation stations② Continuous precipitation: maximum continuous precipitation, the longest continuous precipitation③ Extreme precipitation④ Rain and water assessment⑤ Water regime monitoring⑥ Water information query⑦ Area statistical analysis⑧ Rainstorm process⑨ Next 7 days pre-assessment, etc.
Drought	A total of 11 modules	<ul style="list-style-type: none">① Drought MCI index② Drought indices and corresponding number of drought days, number of drought and Perennial value, equidistant, etc.③ KA factor view and modification④ Penman evapotranspiration and Thothwait calculation, query and statistics
Typhoon	A total of 7 modules	<ul style="list-style-type: none">① Generate typhoon comprehensive query② Login typhoon comprehensive query③ Track query of tropical cyclones④ On land maintenance time query⑤ Comprehensive query of tropical cyclone disaster⑥ Assessment of tropical cyclone disaster⑦ Analysis of tropical cyclone

Practice :6 Climate Service Panel (APP/Mall)

Lessons and Experiences: How to Transfer from Climate Science to Climate Service

Understanding the benefits of climate services

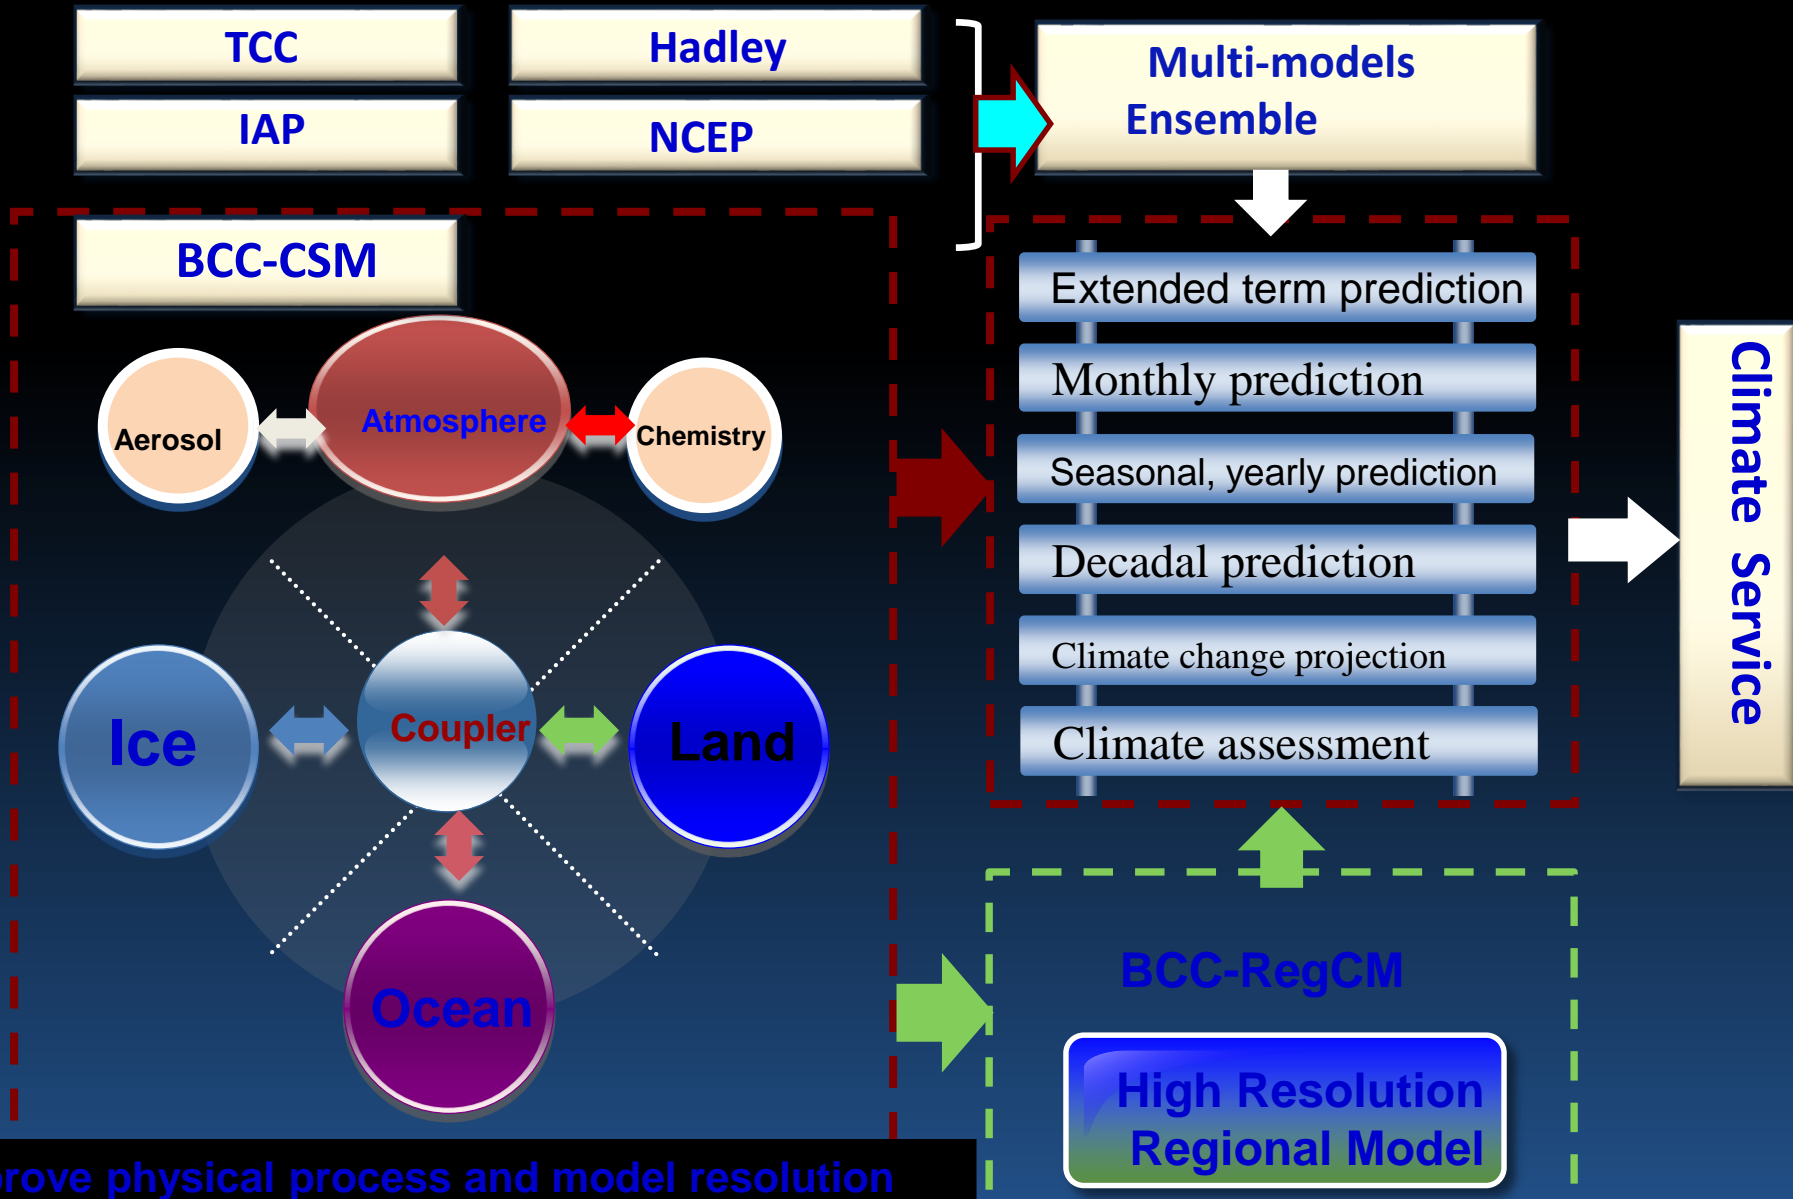

Process of developing climate services

Services are developed through thorough and ongoing engagement between providers and users.

Future Development

- ✓ To enrich the data pool
- ✓ To provide more timely, accurate and tailored climate services
- ✓ To construct seamless forecasting system
- ✓ To help users better understand the climate knowledge and get benefits from it
- ✓ To extend climate service area to help society plan for and adapt to climate variability and climate change, keep climate security
- ✓ To develop Climate Service Panel (CLAP) in three years

CFCS keep going

*Climate Knowledge,
Put into Practice*
